# LAKE TAHOE BASIN WATER USE INVENTORY 1996

STATE OF NEVADA  
DEPARTMENT OF CONSERVATION AND NATURAL RESOURCES

by: Brian E. McRae, Staff Engineer I  
Robert K. Martinez, P.E., Manager II

## ABSTRACT

Lake Tahoe is the primary source of potable water for the communities within the Tahoe basin. The Nevada portion of the Lake Tahoe hydrographic basin is bounded by the California-Nevada State line to the west, and the Tahoe Rim to the east and north. It contains several large and small communities including Stateline, Kingsbury Grade, Round Hill, Zephyr Cove, Skyland, Cave Rock, Logan Shoals, Glenbrook and Incline Village. The water purveyors that supply these communities divert the largest portion of potable water within the Lake Tahoe Basin. The following table shows the distribution of permitted water usage.

USE	MUNICIPAL AND QUASI-MUNICIPAL	DOMESTIC	IRRIGATION AND STOCK	RECREATION	COMMERCIAL
TOTAL PERMITTED RIGHTS	12,845 AFA	339 AFA	1,750 AFA	586 AFA	425 AFA
1996 USE	8,341 AFA	102 AFA	659 AFA	386 AFA	11 AFA

In the Nevada portion of the Lake Tahoe hydrographic basin, the total quantity of permitted, certificated, and vested water rights equals **16,235** acre-feet per annum. The total quantity of water diverted and placed to beneficial use for 1996 equals **9,499** acre-feet. Two-hundred and ninety acre-feet (290 AF) of water rights are also permitted for storage, power, environmental and other uses, but these quantities are not presented in this table because no water was put to beneficial use under these rights in 1996.

The total consumptive use allocated for the Nevada portion of the Lake Tahoe Basin is 11,000 acre-feet. This allocation was determined by the California-Nevada Interstate Compact as ratified by the Nevada Legislature in 1971. The Interstate allocation of all waters in the Lake Tahoe Basin may later be confirmed by Public Law 101-618. In 1990, the law was ratified by Congress and signed by the President and does not become effective until all of the conditions of that law are satisfied. The Compact also states that administration of the water rights and water usage of Nevada's portion of the Lake Tahoe Basin be carried out by the State Engineer.

This report will explain in detail the numbers provided above and give a thorough explanation of pertinent provisions of the California-Nevada Compact. Other ancillary information will also be provided.

# LAKE TAHOE BASIN

## Hydrographic Basin 90

## PURPOSE

The purpose of this report is to estimate and describe the amount of water diverted from surface and groundwater sources contained in the Nevada portion of the Lake Tahoe Hydrographic Basin (hereinafter referred to as Lake Tahoe Basin). The need for better management of the water resource due to increasing demand and the need to comply with provisions set forth by the California-Nevada Interstate Compact Commission necessitates the production of this report. A study was conducted on information available on file in the State Engineer's office in Carson City, Nevada on all uses of water in the Lake Tahoe Basin permitted or otherwise. Field investigations were then conducted by personnel of the State Engineer's office to compare and verify information obtained in the study. Information obtained from this study and investigation is presented in this report in support of the total water use estimates. Other information on major users and approximation of domestic well pumpage is also presented in this report.

## INTRODUCTION

The Lake Tahoe Basin is situated in the Sierra Nevada Mountains about thirty miles southwest of Reno, Nevada and about one-hundred twenty miles east of Sacramento, California. The total surface area of Lake Tahoe is approximately 191 square miles and the area of its watershed is approximately 315 square miles. Approximately one third of the lake and watershed areas lie within the State of Nevada.

The lake and the surrounding mountains create an environment that provides year-round recreation of all types and outstanding views and scenery. Some of the many sports and activities available in the Lake Tahoe region are alpine, nordic and water skiing, boating, hiking, horsebackriding, golf, sightseeing, gaming at the casinos, not to mention the dining and leisure activities offered in the area.

The multitude of recreation and leisure activities in the Lake Tahoe area has created a large draw for tourists and consequently a big tourist industry. Modern day development has been quick to keep pace with the rising number of visitors in the area. The year-round and part-time resident population has also been on the increase over the last couple of decades. Today the Lake Tahoe area receives over 2 million visitors a year who travel to over twenty-five population centers in the area. The current population within the entire basin is now over 75,000 people. This increase in population and tourism has placed a heavy burden on the basin's water resources.

## SCOPE OF INVESTIGATION AND REPORT

The California-Nevada Interstate Compact was initially ratified by Nevada Legislature in 1969. California then amended the compact and ratified it on September 19, 1970 (Ch 1480. CA STAT 1970). Nevada ratified the compact again on March 5, 1971 with amendments (NRS 538.600). The Compact Commission had been holding negotiations on the Compact since 1955. To date, Congressional approval of the compact has not occurred.

The Compact sets forth provisions for the equitable apportionment of waters between the two States. The provisional allocation of the waters of the Lake Tahoe Basin for the State of Nevada is 11,000 acre-feet annually and for the State of California is 23,000 acre-feet annually for use within the respective portions of the Lake Tahoe Basin. Water after use may be exported out of the basin. The State of Nevada's portion is administered by the Office of the State Engineer. On January 23, 1990 Public Law 101-618 was passed, reaffirming in section 204 (b)(1) the quantities of allocation described above. However, several conditions must be met before P.L. 101-618 goes into effect and are not described herein.

Information for this study was collected in two stages. First, information on file at the State Engineer's office regarding all appropriated, adjudicated and vested water rights in the Nevada portion of the Lake Tahoe Basin was collected along with any other information on water uses within the Lake Tahoe Basin. This information was then examined to determine the total allocations on file in the Nevada Portion of the Lake Tahoe Basin. All of the water right data was then cataloged so that it could be sorted by owner of record, manner of use, or location of the point of diversion.

Second, field investigations were conducted to compare the actual diversions of water with the amount of appropriated, adjudicated and vested water determined in the initial study of records.

Data collected in these investigations consisted of:

1. Source of water (Lake, stream, spring, underground or other)
2. The amount of water used determined by flowmeter readings or best estimate
3. The place and manner of use
4. The number of dwellings or units served
5. Current owner of the water right
6. Whether the current use is seasonal or year-round
7. Whether or not the water is being put to beneficial use

A majority of the water used at Lake Tahoe is conveyed to the consumer by a General Improvement District or by water companies under the jurisdiction of the Public Service Commission of the State of Nevada. Few cooperative non-profit associations which were formed to distribute water to a group of users remain. Some isolated dwellings continue to receive water from privately owned systems. Most diversions of water for municipal or quasi-municipal uses of water are equipped with a totalizing meter. Readings from totalizing meters provided field investigators with the most readily available information on the amount of water usage from a particular diversion.

Some quasi-municipal diversions and most domestic, irrigation, and other uses did not have totalizing meters attached. Other uses include storage, power, environmental and other. In the cases of quasi-municipal and domestic water rights, estimates of water usage were made

by counting the number of units or dwellings hooked up to a particular diversion and determining if the place of use received year-round or seasonal use. If the water right in question was for irrigation and did not have a meter or other measuring device, investigators determined if the cultural acreage shown on maps available in the State Engineer's Office approximately matched what was currently being irrigated. If the irrigated acreage matched the cultural map then the amount of water used was determined to be equal to the amount stated in the water right. If only a portion of the land was irrigated then investigators estimated how much acreage was actually irrigated based on comparisons made with the cultural maps. If the water right in question was for other uses and did not have a meter, investigators determined if water was still being supplied to the use described in the permit itself. If water was still being supplied then investigators assigned a water use estimate based on the amount issued under the permit.

Investigators also paid special attention to the quantity of water rights permitted out of the same point of diversion and to the places of use for each of the water rights so that the supplemental nature of the water rights would be fully considered.

Water rights may be acquired by appropriation in Nevada in two ways. The first way includes claims of vested rights. Vested water rights (pre-statutory) were appropriated by simply diverting the water and placing it to beneficial use. These rights are recognized by filing a Proof of Appropriation in the office of the State Engineer. The Proof of Appropriation provides evidence that the water in question has been beneficially used prior to March 1, 1905 for surface waters, prior to March 22, 1913 for artesian groundwater and prior to March 25, 1939 for percolating groundwater. The Proof of Appropriation, once accepted by the State Engineer's office, becomes the claim of vested right. The role of the State Engineer is to determine the

validity, limit and extent of the claim. In some cases these vested water rights have been confirmed by the court in the general adjudication process. The claimant can continue to use the water unless a court of law determines otherwise. Water rights can also be acquired through the appropriation process outlined in Nevada Revised Statutes (NRS) 533 and 534.

In Nevada, a water right may be bought and sold as real property independent of the land it serves. Transfers of ownership are recorded in the State Engineer's office, and, any change in the Point of Diversion, Manner or Place of use of the water right is subject to the provisions of NRS.533 and 534.

## BASIC DATA AND PROCEDURES

In the Nevada portion of the Lake Tahoe hydrographic basin, the total quantity of permitted, certificated and vested water rights equals 16,235 acre-feet per annum. The total quantity of water diverted and placed to beneficial use in 1996 equals 9,499 acre-feet per annum. The following table summarizes this water usage data and itemizes it by manner of use.

USE	MUNICIPAL AND QUASI-MUNICIPAL	DOMESTIC	IRRIGATION AND STOCK	RECREATION	COMMERCIAL
TOTAL PERMITTED USE	12,845 AFA	339 AFA	1,750 AFA	586 AFA	425 AFA
1996 USE	8,341 AFA	102 AFA	659 AFA	386 AFA	11 AFA

Additional appropriations in the amount of 290 acre-feet per annum for storage, power, environmental and other uses are not quantified in this table because no water was put to beneficial use under these rights in 1996. These totals for all manners of use are further described as follows:

### Municipal and Quasi-municipal Use

The single largest use of water in the Lake Tahoe Basin is municipal and quasi-municipal. The majority of the permits issued for municipal and quasi-municipal use are held by seven purveyors. Most of these purveyors own quasi municipal rights and some own a combination of both municipal and quasi-municipal rights.

From north to south these purveyors are:

1. Incline Village General Improvement District (IVGID)
2. Glenbrook Water Cooperative (Glenbrook)
3. Logan Creek General Improvement District (LCGID)
4. Douglas County
5. Round Hill General Improvement District (RHGID)
6. Kingsbury General Improvement District (KGID)
7. Edgewood Water Company (Edgewood)

All information on diversion totals for the above purveyors were supplied by the purveyors themselves. Meter readings were taken by personnel of the State Engineer's office during field investigations to verify these totals.

PURVEYOR	IVGID	GLENBRK.	LCGID	DOUGLAS	RHGID	KGID	EDGEWD.
PERMITTED DUTY (AFA)	4,018	280	20	718	428	1,802	1,685
1996 USE (AFA)	4,007	275	6	609	393	1,488	1,320

**IVGID** supplies water for the community of Incline Village and the Crystal Bay area. IVGID diverts water from Lake Tahoe from a single intake located at Burnt Cedar Beach. The water is conveyed to residential and commercial units within its service area. IVGID currently holds 4,018 acre-feet of water rights. During the calendar year of 1996 IVGID diverted 4,007 acre-feet of water.

**Glenbrook** supplies water from one intake in Lake Tahoe for residences in the Glenbrook Bay area and one fire station on Hwy 50 above Glenbrook. The golf course located in Glenbrook holds its own water rights under the name of The Glenbrook Company and supplies the water through its own system. Currently Glenbrook is constructing a new intake in Lake Tahoe with an ozone treatment facility to replace the existing chlorination facility. Glenbrook currently holds 280 acre-feet of water rights. During the calendar year of 1996 Glenbrook diverted 275 acre-feet of water.

**LCGID** supplies water from two wells in the Logan Creek area for twenty-three single-family residences. LCGID owns 19.61 acre-feet of water rights to serve the above residences. During the calendar year of 1996 LCGID diverted six acre-feet of water. LCGID also owns 95 acre-feet of water rights to divert from Logan Shoals Creek No. 1 (a.k.a. South Logan Shoals Creek). However, during the calendar year of 1996 LCGID did not divert any water under its stream rights.

**Douglas County** supplies water from Lake Tahoe for the areas of Uppaway, Cave Rock, Skyland and Zephyr Cove. These four areas were previously supplied by private water companies respectively named Uppaway Water Company, Cave Rock Water Company, Skyland Water Company and Zephyr Cove Water Utility District. Douglas County now serves these areas from the same four intakes and distribution systems as did the private companies. Douglas County currently holds 717.6 acre-feet of water rights. During the calendar year of 1996 Douglas County diverted 609 acre-feet of water.

**RHGID** supplies water from Lake Tahoe from one intake for residences and commercial businesses in the Round Hill area. RHGID currently holds 427.22 acre-feet of water rights. KGID owns two water rights totaling 3.93 acre-feet that are diverted from RHGID's intake to serve a portion of KGID's service area. Stephen Bourne also owns 29.84 acre-feet of water rights that are diverted from RHGID's intake to serve a place of use owned by Stephen Bourne. During the calendar year of 1996 RHGID diverted 293 acre-feet of water. This figure includes an unspecified amount of water that was conveyed to KGID's and Stephan Bourne's places of use under their respective water rights.

**KGID** supplies water from one intake in Lake Tahoe and from one well on Kingsbury Grade to residences and businesses in the Kingsbury Grade area. KGID currently owns 1802.03 acre-feet of water rights to divert out of its lake intake and 299 acre-feet of water rights to divert from its one active well. KGID also owns 3.93 acre-feet of water rights to divert from RHGID's intake and convey to a portion of KGID's service area. KGID's diversion total from RHGID's intake is included in RHGID's Diversion total and not KGID's. During the calendar year of 1996 KGID diverted a total of 1488 acre-feet of water from its lake intake and well combined.

KGID also owns 704 acre-feet of water rights to divert from other wells in the Kingsbury Grade area. During 1996 KGID did not divert any water from these wells.

**Edgewood** supplies water from one intake in Lake Tahoe for eleven casinos plus businesses and residences in the Stateline area. Water for the Edgewood Golf Course is supplied

from an intake from Edgewood Creek under a separate set of water rights issued for recreation purposes (see recreation use p. 12) equaling 450 acre-feet of water. Edgewood currently owns and controls 1684.64 acre-feet of water rights for quasi-municipal use in its service area. During the calendar year of 1996 Edgewood diverted 1320 acre-feet of water.

### **Other Quasi-Municipal Uses**

Many quasi-municipal water rights owned by persons or entities serve a small number of dwellings from one diversion or serve multiple uses from one diversion. The total amount of water appropriated for quasi-municipal use in the Nevada portion of the Lake Tahoe Basin other than those listed above is 3,862.13 acre-feet. During the calendar year of 1996 personnel from the State Engineer's office estimated the total amount of water diverted for quasi-municipal use at 346 acre-feet. This figure does not include any water diverted by the major purveyors listed above.

### **Domestic Use**

Approximately 64 acre-feet water is diverted for domestic use directly from Lake Tahoe under seventy-nine individual water rights. Each of these water rights is permitted for one point of diversion to serve one single-family residence. Many of these water rights are no longer in use and the dwellings receive water from a water purveyor (See appendix, any domestic water right with zero use receives water from a purveyor). Of these active water rights approximately twelve had totalizing meters connected. Therefore the amount of water specified under each

water right that showed evidence of use in 1996 was added up to determine the total diversion of appropriated domestic water use from Lake Tahoe.

A search conducted of the well log database at the State Engineer's office identified 93 domestic wells in the Lake Tahoe Basin. An estimate of 357 gallons per day (gpd) was used to calculate a total diversion from domestic wells at 38 acre-feet.

### **Irrigation and Stockwater Use**

Approximately 185 acres of land is irrigated in the Lake Tahoe Basin based on maps on file at the State Engineer's office. This acreage exists in the Glenbrook Creek, Zephyr Cove Creeks, McFaul and Edgewood Creek areas. Golf courses also create a large demand for irrigation water. However, water used on golf courses has been labeled as either recreational or quasi-municipal use. The water used to irrigate the pasture land in the above areas was decreed under the Glenbrook Creek Adjudication, the Zephyr Cove Creek Adjudication and the Edgewood Creek Adjudications respectively. These adjudications specify a certain acre-foot per acre duty for the irrigated lands. Using the duty specified, personnel at the State Engineer's office calculated the total diversion of water for irrigation use to be 659 acre-feet in 1996.

Included in the irrigation diversion of the streams is the stockwater diversion. There are two stockwater rights on file in the State Engineer's office for 4.2 acre-feet. The decrees on the streams in the Lake Tahoe Basin specify that the stockwater use is included in the irrigation diversion total. The only observed stockwater use was on lands irrigated in the Edgewood Creek and Mcfaul Creek areas.

**Recreation use**

Five-hundred and eighty-six acre-feet of water is appropriated for recreational use. These appropriations are for snow-making at Heavenly Valley, irrigation for Edgewood Golf Course, and for use at the State Parks and campgrounds. The total recreation use for the parks, campgrounds and golf course was estimated at 386 acre-feet based on information on file at the State Engineer's office and pumpage reports submitted by Edgewood Golf Course. The water used for snowmaking at Diamond Peak Ski Resort is included in IVGID's pumping total. Heavenly Valley's permit to divert water for snow-making specified that using water for snow-making is a non-consumptive use therefore it is not counted against the 11,000 afa allocation.

**Commercial use**

Four-hundred and twenty-five acre-feet of water is appropriated for commercial use. The actual amount of water put to beneficial use was estimated at 11 acre-feet.

**Storage Power and Other Use**

Several permits are held for storage, power and other uses totaling 290 acre-feet. Personnel from the State Engineer's office did not observe any evidence that this water was put to beneficial use during the calendar year of 1996.

**Environmental use**

Water rights totaling 39.41 acre-feet is appropriated for environmental purposes. These water rights are groundwater permits used for site remediation of contaminated ground water.

Environmental permits are issued under NRS 533.4373 in conjunction with the Nevada Division of Environmental Protection. The ground water is extracted, treated and either reinjected or discharged into the storm drain system. For the purposes of this report, environmental appropriations were considered to be non-consumptive.
