CERTIFIED SHORTHAND REPORTER

| -27 | |
|-----|---|
| 1 | (Whereupon KATRINA JACOBSON and WALTER S. GARDNER |
| 2 | were duly sworn) |
| 3 | MR. YEAMANS: We are here today to take the |
| 4 | testimony of Mr. and Mrs. Gardner of Ruby Valley |
| 5 | Nevada, we are discussing the matter of the historic |
| 6 | water use on the diamond springs ranch in Diamond |
| 7 | Valley, Nevada. |
| 8 | The ranch itself is some 25 or so 30 miles |
| 9 | north of Eureka, Nevada and the ranch sits on the |
| 10 | east side of Diamond Valley. |
| 11 | KATRINA JACOBSON GARDNER |
| 12 | called as a witness on behalf of Mr. Yeamans, |
| 13 | having first been duly sworn, testifies as |
| 14 | follows: |
| 15 | EXAMINATION |
| 16 | BY MR. YEAMANS: Q. Mrs. Gardner, if you will |
| 17 | give your full name Katrina J Gardner, it is Jacobson |
| 18 | Gardner. Walter S Gardner Ruby Valley, Nevada. |
| 19 | Q. I will start with Mrs. Gardner first just |
| 20 | to identify who she is? |
| 21 | MR. GARDNER: She was born there. |
| 22 | Q. What was your maiden name, Mrs. Gardner? |
| 23 | A. Katrina Jacobson. |
| 24 | Q. And who was your father? |
| | 3 |

Jorgan Jacobson. 1 Α. 2 Would you spell his first name? 0. 3 J-o-r-q-a-n B Jacobson. Α. 4 Where do you currently live, Mrs. Gardner? 0. 5 Ruby Valley, Nevada. Α. And how long have you lived there? 6 0. 7 Α. 59 years. 8 Q . And do you live on a ranch or in a 9 subdivision, in a city, in a town? 10 A. In a ranch. 11 Q. And has that been a ranch for the last 59 12 years that you have lived there? 13 A. Yes. 14 MR. GARDNER: May I say something. She hasn't always lived on this ranch, but she's lived nearby 15 16 ranches, part of the Gardner ranches. 17 Q. Oh, all right. 18 Now what is todays date, Mrs. Gardner? 19 Α. September 30th, 1989. 20 0. And where are we now seated? 21 At the home of Eileen Penrod. Α. 22 Okay. And who is present in the room here 0. 23 today? 24 Α. Yourself, and you are.

| 1000 | |
|------|---|
| 1 | Q. My name is Frank Yeamans? |
| 2 | A. Janelle Grantham, and Milton Thompson, |
| 3 | Walter Gardner, my husband Walter Gardner. |
| 4 | Q. And why are we here today? |
| 5 | A. We are here to talk about the conditions of |
| 6 | the water on the Diamond springs ranch in Diamond |
| 7 | Valley, Nevada. |
| 8 | Q. Okay. What was the date of your birth, |
| 9 | Mrs. Gardner? |
| 10 | A. May 9th 1909. |
| 11 | Q. And your place of birth? |
| 12 | A. Elko, Nevada. |
| 13 | Q. And where were your parents living at the |
| 14 | time of your birth? |
| 15 | A. In Diamond Valley, Nevada at the Diamond |
| 16 | springs ranch. |
| 17 | Q. And your parents were, what were their |
| 18 | names? |
| 19 | A. Jorgan P Jacobson and Grace Phoebe |
| 20 | Jacobson. |
| 21 | Q. Could you spell her middle name, please? |
| 22 | A. P-h-o-e-b-e. |
| 23 | Q. And where did your parents live, once again |
| 24 | where did your parents live at the time of your |
| | |

| 1 | birth? |
|----|---|
| 2 | A. At the Diamond springs ranch in Diamond |
| 3 | Valley, Nevada. |
| 4 | Q. Okay. Now, is that the ranch that is now |
| 5 | called the Thompson ranch? |
| 6 | A. It is. |
| 7 | Q. We'll call this Exhibit 1. |
| 8 | Exhibit 1 is a 15 minute topographic map |
| 9 | with a label or titled Diamond springs, Nevada. |
| 10 | Now, Mr. Jacobson Mr. and Mrs. Gardner |
| 11 | will you come here one second now. |
| 12 | We want to make sure that when we discuss |
| 13 | your home and your birth place you refer to it as the |
| 14 | Diamond springs ranch, now on this map as we went |
| 15 | over it we can see that it has the McGinni ranch |
| 16 | going north of Eureka. There is a ranch called the |
| 17 | Thompson ranch in section 3. North of the Thompson |
| 18 | ranch in section 34 is a location called Diamond |
| 19 | springs? |
| 20 | A. That would be one mile between them. |
| 21 | Q. Yes, ma'm that's correct approximately one |
| 22 | mile between them. Now on this map what represents |
| 23 | your original home place, is it the Diamond springs |
| 24 | in section 34 or what is now called the Thompson |
| | 6 |

| 1 | ranch? |
|----|--|
| 2 | A. The Thompson ranch. |
| 3 | Q. So the Thompson ranch would be the same |
| 4 | that you grew up on known as the Diamond springs |
| 5 | ranch? |
| 6 | A. Yes. |
| 7 | Q. Thank you. Now you say that you were born |
| 8 | in Elko and then your parents took you back to the |
| 9 | Diamond springs ranch? |
| 10 | A. Yes, my Mother came to Elko for doctors |
| 11 | care when I was born. |
| 12 | Q. How long did you live at the Diamond spring |
| 13 | ranch? |
| 14 | A. Well, from the time I was born until, well |
| 15 | I graduated from high school I wasn't home. It was |
| 16 | always home until I married in 1931. |
| 17 | Q. So you lived on the ranch from |
| 18 | approximately 1909 to 1931? |
| 19 | A. Right. |
| 20 | Q. And that was home? |
| 21 | A. That was home. |
| 22 | Q. Okay. Now who lived on the ranch there. |
| 23 | Did your parents live there? |
| 24 | A. Yes. And by that time my Father had |
| | 7 |

| 1 | acquired the Diamond springs, as indicated on your |
|----|---|
| 2 | map, ranch and also the ranch 7 miles to the north of |
| 3 | that which was the Box springs ranch and belonged to |
| 4 | my grandparents. |
| 5 | Q. What were their names? |
| 6 | A. Andrew and Emma Dibble D-i-b-b-l-e. |
| 7 | Q. Okay. And what was the name or another |
| 8 | name for the Diamond springs located in section 34 at |
| 9 | the mouth of telegraph canyon, was there a ranch name |
| 10 | for that? |
| 11 | A. Just the Cox ranch. |
| 12 | Q. Okay. The Cox ranch or the Cox place. Did |
| 13 | any one else live at the Diamond springs ranch which |
| 14 | is what we are now referring to the present day |
| 15 | Thompson ranch? |
| 16 | A. You mean the present day Thompson ranch. |
| 17 | No one but our family. |
| 18 | MR. THOMPSON: Didn't you have an uncle. |
| 19 | THE WITNESS: Oh yes my uncle had owned the |
| 20 | ranch and his name was Nels Toft N-e-l-s T-o-f-t. |
| 21 | MR. THOMPSON: And Pete he was there all the |
| 22 | time that I was around there. |
| 23 | MR. YEAMANS: Q. Old Pete was also living there, |
| 24 | is that correct. |
| | |

8

| 1 | MR. GARDNER: He worked at the place, he came |
|----|---|
| 2 | with the place and he worked there. |
| 3 | A. When the ranch changed hands he went with |
| 4 | it. |
| 5 | Q. When did Nels Toft acquire the Diamond |
| 6 | springs ranch? |
| 7 | A. I think perhaps in the early 19 hundreds or |
| 8 | late 18 hundreds. My Father came from was his |
| 9 | nephew and he came from Denmark to work for him on |
| 10 | the ranch in 1900 and 2, I think. |
| 11 | Q. Okay. Did your Father or your uncle ever |
| 12 | talk about the previous owners? |
| 13 | A. Yes. |
| 14 | Q. Which owners did they mention? |
| 15 | A. I know some of the old deeds there was even |
| 16 | some Wines from Ruby valley had owned part of it at |
| 17 | one time, or probably invested money in it. There |
| 18 | was when it was first it was a station for the |
| 19 | teamsters to stop overnight in hauling supplies from |
| 20 | grain and flour from Ruby valley to Eureka and it was |
| 21 | owned buy some people named Studer. And before them |
| 22 | I think it was before them or it may have been after |
| 23 | them there was somebody name Taft instead of Toft |
| 24 | T-a-f-t. |
| | 9 |

| 1 | Q. Did your Father or your Mother or Mr. Nels |
|----|---|
| 2 | Toft describe to you the operations of the ranch when |
| 3 | Mr. Taft owned it, did they ever say how Mr. Taft |
| 4 | operated the ranch? |
| 5 | A. Yes. He evidently had backing and the way |
| 6 | quite alot of money is what I would think even though |
| 7 | they had never mentioned this. But they used it as a |
| 8 | station for people to stay overnight and the |
| 9 | telegraph, line came through there. This was just |
| 10 | for a short time because the Pony Express when the |
| 11 | Pony Express came in they no longer needed the |
| 12 | telegraph, line, or is it the opposite. It's the |
| 13 | opposite? |
| 14 | A. The telegraph line replaced the Pony |
| 15 | Express. |
| 16 | Q. Did you know whether or not Mr. Taft was |
| 17 | the one who dammed up the springs, did any one |
| 18 | ever? |
| 19 | A. Yes. |
| 20 | Q. Okay. Now he dammed up the springs at the |
| 21 | Diamond springs ranch? |
| 22 | A. Yes. |
| 23 | Q. Do you remember how many springs there |
| 24 | were, or roughly just one spring or were there a |
| | 10 |
| | TAMELIAE CRANTHAM |

1 series of springs, or were there two groups of 2 springs. Can you describe a little bit of what you 3 know of it?

4 A. Well I was a child and these things of 5 course were interesting to me, but I didn't in alot of ways wonder about the springs, though, they always 6 7 said that I thought that there were numerous springs in the bottom of this large pond which we had a 8 9 picture of. There were springs seeping up to make 10 the pond, and then there were the springs the ones 11 that supplied water for the house that was a definite 12 spring.

Q. And is it your understanding that Mr. Taft
was the one who originally dammed up the springs?

15 A. I thought that Mr. Taft was the one that 16 made it into a ranch and dammed up the springs. Made 17 the various ponds as they were. He planted a large 18 Orchard. We had beautiful apple and pears and goose berry patches and so forth when I was a child. And 19 20 in order to pump the water for the Orchard which was on the hill right back of where the present house is 21 22 part of the Orchard is there.

Q. Is this on the north side of the presentbuildings?

| 1 | A. It was on the west and on the north. |
|----|---|
| 2 | Q. Uh huh? |
| 3 | A. Between the pond where we went swimming and |
| 4 | the house and there were also several pear trees down |
| 5 | below the old Adobe house, maybe four or five pear |
| 6 | trees. And in order to get the water onto, up the |
| 7 | hill he installed a water wheel that was drawn by |
| 8 | horses. |
| 9 | Q. A water pump? |
| 10 | A. A pump that a horse was hitched to it and |
| 11 | it went around in a circle. Now this was still there |
| 12 | when I was a child. We loved to play on it. |
| 13 | Q. And this was built by Mr. Taft as you |
| 14 | understand? |
| 15 | A. As I understood Mr. Taft had it built. |
| 16 | Q. And that was still there when you were |
| 17 | living as a child? |
| 18 | A. Yes, and I don't know how a child assesses |
| 19 | the size of anything, but I would think that it was |
| 20 | perhaps 15 feet in diameter and it went into like a |
| 21 | hub of a wheel in the center and this rotated by the |
| 22 | horse pulling it around through cogs. |
| 23 | And Minni Cox, who was my Mother's cousin, |
| 24 | was five years old and when she came over to visit |
| | 12 |

| 1 | from what is indicated there as the Diamond springs |
|----|---|
| 2 | ranch which was the Cox ranch she, her Mother visited |
| 3 | Mrs. Taft in the house and she went out to play with |
| 4 | the Taft children and they took her down, they used |
| 5 | to sit on the side of this wheel as the horse pulled |
| 6 | it around, but they had to be careful to be still |
| 7 | while they sat there. And she put her hand out on to |
| 8 | the wheel and the cogs ran over it and she lost her |
| 9 | hand. She was 5 years old. |
| 10 | Q. And this was approximately what year, was |
| 11 | this before you were born? |
| 12 | A. Oh yes. |
| 13 | Q. Okay. |
| 14 | A. About probably 30 years before or 25. |
| 15 | Q. Okay. And this, the horse driven water |
| 16 | pump was located was taking water from which, which |
| 17 | pond was it taking water from? |
| 18 | A. I would think the fish pond as Milton would |
| 19 | called it the fish pond. Do you recall anything like |
| 20 | that. |
| 21 | MR. THOMPSON: As near as I thought that it was |
| 22 | there the little fish pond. |
| 23 | MR. YEAMANS: Q. How about the pond that was |
| 24 | located to the north of Milt Thompson's house, it's a |
| | 13 |

| 1 | large pond up there now it's not full? |
|----|---|
| 2 | A. Our swimming pool. |
| 3 | Q. That was the swimming pool? |
| 4 | A. Uh huh, yes. |
| 5 | Q. And the fish pond where the water wheel was |
| 6 | located is different than the swimming pool? |
| 7 | A. Yes. |
| 8 | Q. Okay. Do you remember any other unusual |
| 9 | features that Mr. Taft may have installed on those |
| 10 | ponds, did he install what's known as a water ram? |
| 11 | A. I don't know if that was installed by Mr. |
| 12 | Taft while he was there or if it was installed later |
| 13 | by later owners. But it was there as long as I could |
| 14 | remember. And evidently something that was quite |
| 15 | ordinary by the time that I could remember that that |
| 16 | hydraulic ram was in place. |
| 17 | But we did have running water which was |
| 18 | quite unusual though it ran constantly and was, and |
| 19 | was quite a small stream because it was pumped up the |
| 20 | hill and filled a one inch pipe and we had to keep it |
| 21 | going constantly because the ram operated on a |
| 22 | constant equilibrium of some sort. |
| 23 | Q. This ram was that drawn by electric motor? |
| 24 | A. No, it was self-sufficient. |
| | 14 |

| 1 | MR. GARDNER: You know how a ram works. |
|----|--|
| 2 | Q. Was it water driven, in other words, the |
| 3 | force of the spring water drove it, is that right? |
| 4 | A. Yes. |
| 5 | Q. And that ram was at the house. Was it |
| 6 | still working while you lived there as a child? |
| 7 | A. It was still working after Walter and I |
| 8 | were married and as long as we owned the ranch. |
| 9 | MR. GARDNER: It worked there as long as I was |
| 10 | there. |
| 11 | Q. Where was the spring that the ram took the |
| 12 | water from? |
| 13 | MR. GARNER: It was slightly above and high |
| 14 | enough to have a little force, as I could see? |
| 15 | A. It was evidently the spring that was |
| 16 | closest to the east on, there was a hill between the |
| 17 | house and the pond, see and it was evidently the one |
| 18 | that was on the edge of the pond. The other springS |
| 19 | were in the pond and were not visible though you |
| 20 | might see some bubbling water coming up once in a |
| 21 | while. This was housed in a housing built up around |
| 22 | it, and I think my Father put in more cement walls |
| 23 | around it, perhaps to improve it. And every once in |
| 24 | a while it would need a new piece of leather put on |
| | |

15

| 1 | it, which was like a gasket and it wouldn't be |
|----|---|
| 2 | pumping correctly, and he would put on a new gasket |
| 3 | and perhaps every five or six years it would wear |
| 4 | out, it may not have been that often, or more often |
| 5 | and they would send to Sears Roebuck for another |
| 6 | ram. Probably Sears Roebuck could furnish you with a |
| 7 | catalog that had it, a hydraulic ram in it. |
| 8 | Q. Now, was this the spring that drove the ram |
| 9 | was that to the east of what was no to the south of |
| 10 | what is known as the fish pond, would that be one way |
| 11 | of identifying the location of the ram? |
| 12 | A. It was a matter of perhaps 20, 25 feet only |
| 13 | between them. But it was the fish pond was a spring, |
| 14 | of course, but it was the one with the ram in it was |
| 15 | a little further east up the hill from the fish pond |
| 16 | and water drained down. |
| 17 | And I think both the fish pond and the |
| 18 | overflow from the ram went into the big pond, is that |
| 19 | correct Walter. |
| 20 | MR. GARDNER: As I remember it there's a line |
| 21 | of trees along the upper edge of the pond that would |
| 22 | be the west side of the pond. This ram was situated |
| 23 | right in the north west corner and kind of come down |
| 24 | and run into the ram and the water went on into |
| | 16 |

| l the |
|-------|
|-------|

| 2 | Q. Up to the house? |
|----|---|
| 3 | A. Well it was pumped to the house. What |
| 4 | wasn't pumped was running into, because it took water |
| 5 | to make it work and that water went on into the pond. |
| 6 | Q. Okay? |
| 7 | A. And a portion of that water went up the |
| 8 | pipe line to the house. |
| 9 | Q. Okay. |
| 10 | A. Does that make it clear as mud. |
| 11 | MR. THOMPSON: Do you want to correct that it |
| 12 | was east instead of east |
| 13 | MR. YEAMANS: Q. So it would be on the north |
| 14 | east edge of the pond rather than the north west? |
| 15 | A. Yes. |
| 16 | MR. GARDNER: Thanks for checking. |
| 17 | Q. When your Father operated the Diamond |
| 18 | spring ranch what type of ranch was that, what were |
| 19 | the ranching operations that he carried on at the |
| 20 | ranch, Mrs. Gardner? |
| 21 | A. It was cattle ranching and then later when |
| 22 | sheep men came in and took the mountains for their |
| 23 | range the ranchers also invested in sheep in order to |
| 24 | hold their claim on the range. |
| | |

17

| 0. So your Father ran cattle on not only Correct me if I'm wrong, I don't want to lead you on here, but, he put cattle on the range at the Diamond spring ranch? A. On the mountains, not on the ranch, the sheep went on to the mountains but the cattle went on to the range, and on to the natural meadows, that were enlarged by the fact that the water had been dammed and so made it moremay I clarify that. Q. Yes? A. In the winter you had to feed your cattle on count of the snow and the cold weather and the water made stags that's where the hay was and the cattle came to eat. Otherwise in the summer or spring they were out on the range and ranged back and forth on the mountain. Q. So when he was. Now is it correct to say that your Father was raising hay on the ranch for winter feed? M. GARDNER: Yes? A. Yes. Did he raise hay to sell, or did he sell any of the hay that he raised? A. Yes. At that time they were still main | | |
|---|----|---|
| here, but, he put cattle on the range at the Diamond spring ranch? A. On the mountains, not on the ranch, the sheep went on to the mountains but the cattle went on to the range, and on to the natural meadows, that were enlarged by the fact that the water had been dammed and so made it moremay I clarify that. 0. | 23 any of the hay that he raised? 24 A. Yes. At that time they were still main | 21 | A. Yes. |
| A. Yes. At that time they were still main | 22 | Q. Did he raise hay to sell, or did he sell |
| and the the the they were better main | 23 | any of the hay that he raised? |
| 18 | 24 | A. Yes. At that time they were still main |
| | | 18 |

| 1 | way of transportation were horses and wagons and |
|----|---|
| | |
| 2 | Eureka had livery stables that housed the horses and |
| 3 | when I was quite small we had a baler, did any of |
| 4 | that ever appear on the ranch, an old baler. |
| 5 | MR. GARDNER: I never did see it. I heard that |
| 6 | it was there. He also had the mail contract of |
| 7 | Eureka and he baled hay to haul in to his stock |
| 8 | because he had to stay overnight and come back with |
| 9 | the mail the next day? |
| 10 | A. That's right and then he would, sell some |
| 11 | of this to people that needed hay if we had a surplus |
| 12 | of hay. |
| 13 | Q. So alot of the hay would have been used for |
| 14 | the cattle, for feeding your own cattle in the winter |
| 15 | time? |
| 16 | A. Mostly, yes. |
| 17 | Q. And what was surplus hay would have been |
| 18 | sold? |
| 19 | A. Yes, not to any great extent but sometimes |
| 20 | there was, that was just a little extra income. |
| 21 | (Whereupon an off the record discussion |
| 22 | ensued.) |
| 23 | MR. YEAMANS: Q. Back on the record. We were |
| 24 | talking about the previous owners of the Diamond |
| | 19 |

springs ranch and we were discussing a baler that was 1 2 on the ranch when you lived there as a young girl, Mrs. Taft-- Mrs. Gardner, excuse me. 3 Do you know who originally purchased the 4 baler for the ranch, was that your Father or your 5 uncle Nels Toft, or was it there when they purchased 6 7 the ranch? A. I couldn't say. 8 9 Q. But it was there, was it an old baler when 10 you remember it as a young girl? 11 A. It was just the baler that sat there and at 12 that time it sat this one place and you hauled the 13 hay to the baler and and put it in. 14 MR. GARDNER: It is what you call a stationary 15 baler. You crammed it down in there and then you 16 tied the wires on it and some way or other it got 17 pushed out. 18 Q. Were there. Now let's see let's go back 19 and describe the springs and the pond that were built up behind the dam. 20 21 Did all of the spring water or was all of 22 the spring water contained behind the dams or did any 23 of the spring water just sort of run free the outside 24 of the control of the dams? 20

| A. Well, in the pond that we call the swimming |
|--|
| 2 pool which was situate north of our house and was |
| 3 was a little closer to the mountains there was a |
| 4 large spring perhaps enclosed with a fence around it |
| 5 and it was perhaps 25 feet in diameter. Maybe not |
| 6 that large but about that large and a deep spring and |
| 7 it was enclosed with a fence, and the water from that |
| 8 came out in a channel into the swimming pool which |
| 9 was a large dam made in a semi circle. |
| 10 Q. And that was a dam, a man made dam? |
| 11 A. That was the man made dam and the spring |
| 12 was as it was in its natural state above, and it had |
| 13 probably run free, and so much went into fill this |
| 14 pond for a holding pond when they needed to |
| 15 irrigate. And it had a headgate on the northwest end |
| 16 of it and Dad would regulate the water for the fields |
| 17 by raising this headgate, a wooden gate so many |
| 18 inches or feet to let the water run out onto the |
| 19 field, and then when they were adequately irrigated. |
| 20 He would push it down and let the dam fill again and |
| 21 that way it gave it the more of a run as it went down |
| 22 onto the fields when it scattered. |
| 23 MR. GARDNER: As I remember it they used water |
| 24 from there to irrigate their potatoe patch so it went |
| |

1 off to the north to ground out that way to irrigate
2 the potatoes?

- de

The A server have

| 3 | A. Yes, and the field over there that also had |
|----|---|
| 4 | a spring in it. Now near the potatoe patch there was |
| 5 | a spring, quite a boggy deep spring and we lost |
| 6 | several horses that got in their reaching 4 green |
| 7 | grass. It was a smaller spring perhaps 12 feet |
| 8 | across and they would go in and get in to for and |
| 9 | mire down and we lost a very family pet called |
| 10 | Cheyenne an old mare in there. |
| 11 | Q. What year was this, do you remember. |
| 12 | A. Perhaps about 1923 or 4. |
| 13 | Q. Now, just one more thing on the swimming |
| 14 | pool, or swimming pond. |
| 15 | Now all of that spring water was controlled |
| 16 | by that dam and the headgate, is that correct, all of |
| 17 | the spring water had to come down through that |
| 18 | headgate, the natural flow of the spring? |
| 19 | A. There wasn't a head that spring didn't |
| 20 | have a headgate on it. |
| 21 | Q. But the swimming pool? |
| 22 | A. But the swimming pool did. |
| 23 | Q. So all the water flowed into the swimming |
| 24 | pool? |
| | 22 |

1 A. Yes. 2 All of the natural spring flow? Q. Natural spring water but it was fenced to 3 A . keep--4 0. But that wasn't connected to the other pond 5 6 though? 7 A. No not at all. That was a separate? 8 0. 9 That was a separate spring. A . 10 Q. How deep was the swimming pool, do you 11 know? A. I imagine about 6 to 7 feet in the center. 12 13 Q. And did the water fill it all the way up to 14 the level ground? 15 A. Yes, they always said that they saved my 16 life because as a two year old I went head first into 17 it, it is about level and Dad grabbed me by one foot 18 and pulled me out. 19 Q. That's something I would have done. 20 And now the other springs would have been the ones that were to the south of the swimming pool? 21 A. Yes. They were the ones that contributed 22 to the water in the large lake like pond. 23 24 Q. Now, was all of the spring flow from those 23

| 1 | springs controlled by the levy or the dam that made |
|----|---|
| 2 | the large pond? |
| 3 | A. Yes, they all seeped up and the dam on the |
| 4 | west controlled it. |
| 5 | Q. And this was there as long or as early as |
| 6 | you can remember? |
| 7 | A. Yes. |
| 8 | Q. Was there any more source of water for the |
| 9 | ranch from the, was any water diverted from the |
| 10 | canyons up above the ranch to the east? |
| 11 | A. Well the canyon to the east and then to the |
| 12 | south is called horse canyon is that correct, Milt. |
| 13 | MR. THOMPSON: To the southeast, yeah, right |
| 14 | horse canyon? |
| 15 | A. And in the spring there was water from the |
| 16 | snow banks but none of the water was very permanent |
| 17 | it was only, ran a month in the spring, perhaps, that |
| 18 | was just strictly from the snow melt. |
| 19 | Q. And was that diverted from horse canyon to |
| 20 | the ranch to be used for irrigation? |
| 21 | A. Yes. |
| 22 | Q. And all of the water that did flow off of |
| 23 | horse canyon diverted? |
| 24 | A. Yes, but it was very little. |
| | 24 JANELLE GRANTHAM |

CERTIFIED SHORTHAND REPORTER

| 1 | Q. But all of it was? |
|----|--|
| 2 | A. Yes. It had to go somewhere so it went |
| 3 | down on to our field. It did not go into the pond. |
| 4 | Q. Oh. Okay. Do you remember when you were |
| 5 | living at Diamond springs ranch whether the rate of |
| 6 | flow from the springs varied from one time of the |
| 7 | year to the next, or did the springs seem to have a |
| 8 | relatively constant discharge? |
| 9 | A. They were constant. |
| 10 | Q. Were they warm or cold springs? |
| 11 | A. Warm. |
| 12 | Q. Do you remember ever seeing anything in the |
| 13 | winter time on the tops of the springs that would be |
| 14 | a result of the warm water? |
| 15 | A. Well, something that we would call scum |
| 16 | sometimes. |
| 17 | Q. Did the spring ever create fog? |
| 18 | A. Yes, on the very cold day they did. |
| 19 | Q. So these were warm water springs? |
| 20 | A. They never froze over, any of them. |
| 21 | Q. Okay. Do you remember ever some one ever |
| 22 | telling you, or did you ever know what the rate of |
| 23 | the discharge was from all of the springs in gallons |
| 24 | per minute? |
| | |

25

| 1 | A. No, I don't think that we knew exactly how |
|----|---|
| 2 | to measure or comprehend a gallon per minute. |
| 3 | Q. Okay. Did your Father when he was running |
| 4 | the ranch did he use all of that water for use on the |
| 5 | ranch in irrigating the pasture lands, and the hay |
| 6 | fields, stock watering? |
| 7 | A. Yes. |
| 8 | Q. He used the entire discharge of the |
| 9 | springs? |
| 10 | A. Yes, if I suppose some years it was |
| 11 | constant but some years he would enlarge the amount |
| 12 | of land under cultivation by grub, by grubbing. Old |
| 13 | Pete would grub out a little more land around the |
| 14 | edge, but that was more or less just to keep the |
| 15 | brush down and from intruding upon the land. |
| 16 | Q. So all of the water was put to beneficial |
| 17 | use? |
| 18 | A. Yes. |
| 19 | Q. Did your Father ever tell you how much of |
| 20 | the water that the Taft family used, did you ever |
| 21 | have an impression of the spring discharge that |
| 22 | they that they put to beneficial use? |
| 23 | A. I think that they put it to beneficial use |
| 24 | and it was considered that they had really developed |
| | 26 |

the ranch until it was rather a show place. 1 Q. Have you read Mr. Crofut's Dust Diamond 2 3 Devils? 4 Α. Not for several years. 5 Q. He also referred to it as it is a show 6 place and that is when the Taft family owned it? 7 (Whereupon an off the record discussion ensued.) 8 9 MR. YEAMANS: Back on the record. 10 Okay. Mrs. Gardner we are looking at two 11 maps here, we'll identify these as Exhibits 2 and 3. 12 Exhibit Number 2 will be a map entitled 13 lands irrigated by Nels Toft from waters of Horse canyon and Taft springs. Proof of appropriation 14 15 number 0 1 1 4 - 0 1 1 5. 16 Exhibit Number 3 will be a map entitled 17 amended map to accompany proof of appropriation for 18 irrigation and stock watering submitted by Theodore 19 and Olive Thompson from horse canyon and Taft 20 springs. Let me finish identifying them first. 21 Identified as amended map for applications 0 1 1 4 22 and 0 1 1 5. 23 Thank you? 24 Α. May I clarify something privately with 27

| 1 | Milt. |
|----|---|
| 2 | Q. Yes? |
| 3 | (Whereupon an off the record discussion |
| 4 | ensued.) |
| 5 | MR. YEAMANS: Let's go back on the record. |
| 6 | Q. Now we are looking at these two maps, Mrs. |
| 7 | Gardner, showing the land irrigated from what has |
| 8 | been identified as the Taft spring and the Horse |
| 9 | canyon on the map submitted by Nels Toft that is |
| 10 | Exhibit Number 2, and the same area covered under the |
| 11 | Exhibit 3 showing the lands irrigated from what is |
| 12 | now called Diamond springs and Horse canyon. |
| 13 | You see that there is a considerable |
| 14 | difference as the acreage being submitted as being |
| 15 | irrigated from the springs in Horse canyon the map |
| 16 | submitted by Nels Toft shows considerably less |
| 17 | acreage than that submitted by Mr. and Mrs. Theodore |
| 18 | Thompson? |
| 19 | A. Yes. |
| 20 | Q. As you remember as a child living at the |
| 21 | Diamond springs ranch which of the maps and the |
| 22 | irrigated acreage shown on that map more accurately |
| 23 | rents the ranch being used and irrigated when you |
| 24 | were a small child? |
| 1 | 2.0 |

| 1 | A. Well I thought that it was intermediate |
|----|---|
| 2 | but. |
| 3 | Q. Somewhere in between? |
| 4 | A. I know that they were always saying there's |
| 5 | more water. We can get more water out of that spring |
| 6 | and we can enlarge this field, and this is doing we |
| 7 | were able to run a few more cattle this year because |
| 8 | we have cultivated more, but there is always ample |
| 9 | water to be tapped. |
| 10 | Q. And has not? |
| 11 | MR. GARDNER: He also mentioned that old Pete |
| 12 | was always down grubbing brush increasing the size of |
| 13 | the ground that was being used and irrigated. |
| 14 | Q. As you said your impression and |
| 15 | remembrances are that it was more than what was shown |
| 16 | by Nels Toft, but somewhat less than shown by the |
| 17 | Thompson 's? |
| 18 | A. Yes, I would say my judgment at that time |
| 19 | whether I was really paying that much attention to |
| 20 | it, but that the way that it seemed to me that there |
| 21 | was always plentiful water, but that the ranch could |
| 22 | be improved because the water was constant. |
| 23 | Q. Okay. All right. And all of the water |
| 24 | that was coming from the springs was put to |
| | 29 |

beneficial use? 1 2 Α. Yes. 3 0. None of it just fled to waste? A. No, we didn't have any sink like they have 4 5 for the Humbolt river. (Whereupon an off the record discussion 6 7 ensued.) MR. YEAMANS: Back on the record. Now we've 8 9 discussed the springs that were the source of water 10 for the Diamond spring ranch, were there any other areas that could be used for ranching or for raising 11 12 hay that did not have to be irrigated? A. Well that goes into these gardens that were 13 14 irrigated by just digging down a ways and raising 15 potatoes and vegtables without any irrigation. 16 At the Cox place toward the north and it 17 was quite distance from where the house is, but quite 18 a ways maybe a quarter of a mile or more to the north 19 they raised a huge potatoe field and sometimes sold 20 potatoes and that was all subirrigated. 21 Q. Were there subirrigated lands in the 22 vicinity of the Diamond springs ranch to the west of 23 the ponds or was that all irrigated land? 24 A. That was all more or less, and some of it 30

was spungy with water underneath and willows grew.
 You didn't try to raise willows you sometimes rubbed
 them out because it would dam that when you got too
 many.

Q. And this was naturally irrigated, or what6 they would call subirrigated land?

A. I think that it was naturally irrigated or
8 it was irrigation water that didn't go into the ponds
9 or seep into the ponds why it would make a boggy
10 place where willows would spring up and so forth.
11 MR. GARDNER: Subirrigated.

Q. Was there-- were there significant amounts of subirrigated land on the ranch that your Father would not only the Diamond springs ranch but the Cox place and the Box springs ranch to the north, did all these ranches have a significant or fair amount of subirrigate land on them that was naturally irrigated by a a high water table?

19 A. No, I think that they depended mostly upon
20 springs. But there were patches that perhaps there
21 was a spring there and they kept it that way.
22 Q. A natural spring that just flowed?

A. Or seeped in and around itself and would
make land that was more profitable. I really didn't

31

pay too much attention to the source of it, it was 1 2 there. And hay could be raised on these lands? 3 0. 4 Α. Oh yes. The hay crop was the important 5 thing. 6 0. Okay? In the pastures. 7 A . Between the ranches it was 7 miles between 8 9 the Diamond springs ranch which I lived on, and the 10 Box springs ranch where my grandparents and uncle and his wife lived, and this land in between there was 11 12 used for cattle grazing. And these cattle all 13 watered at springs that were outside of the fields. 14 And there were little watering springs and sometimes 15 they became boggy and an animal might bog in to 16 them. But there were springs there for their water. 17 Q. And natural grasses grew in these areas? 18 A . There was the wide open range you might call it, but there had to be water for cattle, or you 19 20 couldn't keep them there. 21 MR. THOMPSON: Could you clarify. 22 There were meadows, around the springs do 23 you recall those natural native meadows. 24 THE WITNESS: At Willow do you know where 32

| 1 | Willow that was a meadow, that was the Cox. |
|----|---|
| 2 | MR. THOMPSON: And then Rock field. |
| 3 | THE WITNESS: Yes and Rock field, and And Rock |
| 4 | pasture. |
| 5 | Rock field they raised a little alfalfa but |
| 6 | mostly sweet clover for hay and Willow was a main |
| 7 | source of hay for the Cox place. And it was quite a |
| 8 | large field, but it sat off there with no buildings |
| 9 | around it, and it had probably been taken up by uncle |
| 10 | Billy Cox. |
| 11 | MR. YEAMANS: Q. How was that irrigated? |
| 12 | A. Probably from the mountain run off but I |
| 13 | think that they were also quite wet fields. |
| 14 | MR. THOMPSON: And also behind the Cox place |
| 15 | there were extensive meadows, do you recall those. |
| 16 | THE WITNESS: Yes. |
| 17 | MR. THOMPSON: And they were quite boggy in the |
| 18 | spring. |
| 19 | THE WITNESS: Yes. Or they were I mean they |
| 20 | were green and, you know, the size of those large |
| 21 | black willows that were over at the Cox place. |
| 22 | MR. THOMPSON: Right. Right and |
| 23 | THE WITNESS: And they also had huge trees all |
| 24 | around the house there, a very shady and very |
| | 33 |

1 attractive place.

| 2 | MR. YEAMANS: Q. Could you describe please how |
|----|--|
| 3 | large was that pond at the Diamond springs ranch the |
| 4 | main pond, do you remember how wide it was or how |
| 5 | long it might have been? |
| 6 | A. Only by looking at the perspective on that |
| 7 | picture I have of it, would you like to see that. |
| 8 | Q. We don't want to take your picture from you |
| 9 | so I guess we can't put it in as an Exhibit because |
| 10 | that's your picture and I don't want to? |
| 11 | A. I had several copies of it Milt probably |
| 12 | has one. |
| 13 | Do you have one. |
| 14 | Q. The size of the main pond at the Diamond |
| 15 | springs ranch? |
| | Springs randar |
| 16 | MR. THOMPSON: The only picture I have of yours |
| 17 | is the one that you sent me. |
| 18 | THE WITNESS: I have several copies of it. |
| 19 | MR. YEAMANS: Q. Would you say it was a large |
| 20 | pond or a big |
| 21 | Q. Well it was quite a little walk down there |
| 22 | from the house you didn't trot down there unless you |
| 23 | wanted to take a long walk and get some exercise. |
| 24 | Q. You are talking down the far end of the |
| | 34 |
| | |

| 1 | pond? |
|----|---|
| 2 | A. Yes. |
| 3 | (Whereupon an off the record discussion |
| 4 | ensued.) |
| 5 | MR. YEAMANS: We are now back on the record. |
| 6 | Q. We have Exhibit Number 4 here which is a |
| 7 | picture, will you describe exactly what that picture |
| 8 | is, Mrs. Gardner? |
| 9 | A. This is a picture of the large pond that |
| 10 | was created by the springs on the east and the trees |
| 11 | are on the east, and the pond extends directly to the |
| 12 | west and it was quite wide besides being quite a long |
| 13 | ways to walk down to the end of it. |
| 14 | Q. Is this the house. Would the house be |
| 15 | located where the trees are in this picture? |
| 16 | A. The house is up here where the smaller |
| 17 | trees are. |
| 18 | Q. So this picture is taken from the west end |
| 19 | of the pond looking east, is that correct? |
| 20 | A. Correct. |
| 21 | Q. And you were describing earlier something |
| 22 | about one of your brothers that was swimming in the |
| 23 | pond? |
| 24 | A. So he went swimming and he got in above his |
| | 35 JANELLE GRANTHAM |

CERTIFIED SHORTHAND REPORTER

| 1 | head and he didn't know how to swim at all. And he |
|----|--|
| 2 | said that he went under and came up and gasp and got |
| 3 | a breath and then he went under again, and he did |
| 4 | this twice and he thought, they say if you go under |
| 5 | three times you won't come up again. And so he |
| 6 | thought quickly what can I do, I'll stay on the |
| 7 | bottom and crawl on the bottom and get out and that |
| 8 | was his story of the way that he got out of there. |
| 9 | Q. How old was your brother when this |
| 10 | happened? |
| 11 | A. About 11 or 12 I think. |
| 12 | Q. So the spring or the pond was quite deep, |
| 13 | is that a fair statement? |
| 14 | A. Yes, and the year after I taught, the first |
| 15 | year that I taught when I came home for the summer I |
| 16 | thought that it would be nice to have a boat to go |
| 17 | out on this pond and this was in 1928 and so no 29 |
| 18 | 1929 and so we sent away to Sears Roebuck, I suppose |
| 19 | and I got a 12 foot boat with some paddles and we |
| 20 | paddled out and all around the edge of the pond and |
| 21 | around the pond and looked at the fish and when |
| 22 | company came they all got a boat ride. |
| 23 | So we thought that it would be great if we |
| 24 | could coax old Pete into taking a boat ride. Now old |
| | 36 |
| | |

Pete was famous for the fact that he was dirty Pete who never took a bath and so finally my younger brothers and sisters got him in the boat, when it was well up on the shore just to show him what the boat was like. And they weren't very nice after they got him into the boat they give it a shove and got him out into the lake.

8 And it was well loaded with four or five 9 kids and old Pete and it got out so far and there 10 were too many people in it and it got right up to the 11 top level of the boat and the boat started to sink.

12 And so we young people could swim, we had 13 learned to swim in the swimming pool by then so we 14 just bailed out, but the boat by that time with 15 everybody jumping up and down and bailing out was 16 sinking. And it went right down with old Pete 17 sitting in it but it didn't go completely down but it 18 went down until he was sitting in perhaps 7 or 8 inches of water and then we went out with ropes and 19 20 tied them and swam in and pulled the boat in. And we 21 said that we gave old Pete a bath.

But he was so frightened I can still seehim sitting there, he was petrified.

24

Q. Now this photograph we are not going to

| 2.13 | |
|------|---|
| 1 | take that, that's yours, Mrs. Gardner but Milt |
| 2 | Thompson says that he has a reproduction of that |
| 3 | photograph that he got from you and we'll submit that |
| 4 | as Exhibit Number 4? |
| 5 | (Whereupon an off the record discussion |
| 6 | ensued.) |
| 7 | MR. YEAMANS: Let's go back one more time here |
| 8 | on the main swimming pond. |
| 9 | First, Mrs. Gardner, we are talking about |
| 10 | old Pete out in the boat. Did that pond rise just to |
| 11 | the level of the land, or was the water level down in |
| 12 | a basin or did it come up to the land surface? |
| 13 | A. It came up almost to the land surface. |
| 14 | Q. Now Milt has some questions about diversion |
| 15 | of the water from the northbound which would be your |
| 16 | swimming pond? |
| 17 | A. Yes. |
| 18 | Q. Now you said that that was a headgate on |
| 19 | the north west side of the pond? |
| 20 | A. May I have time with Milt for a minute. |
| 21 | Q. Where was that water diverted. Milt |
| 22 | Thompson would like to ask Mrs. Gardner about the |
| 23 | diversions of the water from the swimming pond, the |
| 24 | one that has the headgate on the north west side of |
| | 38 |

1 the pond.

2 MR. THOMPSON: You said that there were other 3 diversions.

To my recollection and understanding there was also a diversion pipe on the direct south side of the spring that flowed from this north spring down into the south spring in a ditch that flowed in above the old willow patch that was there.

9 THE WITNESS: Yes, I remember that ditch
10 definitely now, as I said it was more than one could
11 get across.

12 MR. THOMPSON: And then there was another 13 little diversion on the south west side that I 14 believe that irrigated a garden with it was a little 15 square pipe that flowed into a little garden patch. 16 THE WITNESS: Yes. And below that garden patch 17 it seemed that there was enough water after going 18 through the garden some of it went down and across 19 and into the dam, perhaps. 20 MR. THOMPSON: Into the main pond. 21 THE WITNESS: Into the main pond.

22 MR. YEAMANS: Q. So you could control the flow 23 of the water from the swimming pond so that it went 24 also into the main pond?

39

| 1 | A. Yes. Yes, I had forgotten that ditch. |
|----|---|
| 2 | Q. Would you have any way of describing how |
| 3 | high that water stood in the ponds in relation to the |
| 4 | house or to the dams or anything, what they commonly |
| 5 | call the hydraulic head of the spring? |
| 6 | A. It seemed that the water was, the ponds |
| 7 | were full. Why the water came right up to the banks |
| 8 | of them and then sometimes there would be little like |
| 9 | little oh V shape come into the bank here and there |
| 10 | and they weren't smooth banks on the side. |
| 11 | Q. When the ponds were full was there still |
| 12 | discharge over the dams or through the check, the |
| 13 | head valve the headgates? |
| 14 | A. I think if they ever got up near the top of |
| 15 | the dam there would be a fear that they might wash |
| 16 | out and so the headgates would be opened. |
| 17 | Q. Full flowed? |
| 18 | A. Yes, or whatever flow that they thought |
| 19 | that they needed to keep it under control. |
| 20 | Q. So if you shut the headgates there was a |
| 21 | possibility that the spring would wash out the dams? |
| 22 | A. Yes it was being watched, it was near the |
| 23 | house and you watched it without with even thinking |
| 24 | about it. But if you thought that the water was |
| | 40 TANELLE CONNERN |

1 getting high you let more water go out on to your meadow and your irrigated lands. 2 3 Q. So the dams themselves could have been at 4 an elevation lower than what the springs would have put the water up to. In other words the springs 5 6 could have washed the dams out if you would have not 7 opened the headqates, is that a correct statement? 8 A. In some cases, yes. Q. Did your Father have on the pond any safety 9 10 ditches or drainage ditches that would keep the springs from washing out the main dam? 11 12 A. No. Just what was controlled by the 13 headqates which he watched. 14 Q. So he controlled the flow out of the pond 15 from the headgates? 16 A. Well, definitely I would think that was the 17 main -- if it were to a height that was beyond control 18 why that was how he controlled it. 19 Q. Okay. Thank you. 20 Would you mind identifying -- I don't expect 21 you to know alot of details on these, these were 22 smaller fields but can you identify any of the maps 23 that were submitted by your Father. 24 We'll call this Exhibit Number 5, this is a 41

| 1 | proof of appropriation number 0 1 1 1 0 submitted by |
|----|---|
| 2 | Mr. Jorgan Jacobson for the waters of Rock Canyon |
| 3 | Eureka county, Nevada. |
| 4 | Mrs. Gardner this shows a map showing if |
| 5 | you will read what it says along here for the source |
| 6 | of the water? |
| 7 | A. Yes. |
| 8 | Q. And what is that say, what is the source of |
| 9 | the water on this map? |
| 10 | A. Well, I would think that this is east. |
| 11 | Q. Yes, ma'm? |
| 12 | A. That the source of this water would be |
| 13 | coming from the mountain down across the road into |
| 14 | the field into the irrigated field. |
| 15 | Q. Uh huh? |
| 16 | A. And canyons, I was not familiar with the |
| 17 | canyons. But all canyons have natural little spring |
| 18 | that will drain in at sometimes of the year, and |
| 19 | drain down into that, and then the rest would be snow |
| 20 | water. |
| 21 | Q. And your Father would divert the water from |
| 22 | the ditch or from the channel of the creek and use |
| 23 | it to irrigate the pasture land? |
| 24 | A. Yes. |
| | 42 |

| 1 | Q. And that would be this. This was a |
|----|--|
| 2 | diversion point here on the map and it shows a ditch |
| 3 | coming along the east side of what they call the |
| 4 | irrigated land. Now the east side would be on the |
| 5 | mountain side? |
| 6 | A. Yes. |
| 7 | Q. So would it be a true statement to say that |
| 8 | here you have the natural channel waters of Rock |
| 9 | canyon, your Father used a diversion point and |
| 10 | diverted the water above the field so that it would |
| 11 | irrigate the fields below it? |
| 12 | A. Yes, where would the roadway have gone. |
| 13 | Q. The road. The roadway is not shown on this |
| 14 | the roadway should be somewhere? |
| 15 | A. Right along there. |
| 16 | Q. And I'm pointing an area just to the east |
| 17 | of the irrigated? |
| 18 | A. Yes, and running north and south. |
| 19 | Q. Yes, ma'm okay. This is a map for the |
| 20 | waters of Rock canyon, is that correct? |
| 21 | A. Yes. |
| 22 | Q. These are, right, original ones. Now that |
| 23 | was Exhibit Number 5. |
| 24 | This would be Exhibit Number 6 which is a |
| | 43 |
| | JANELLE GRANTHAM |

CERTIFIED SHORTHAND REPORTER

map for proof of appropriations submitted for number 1 0 1 3 2 0 Crofut spring taken from US government 2 3 survey Crofut. 4 THE REPORTER: Could you please spell that. 5 THE WITNESS: C-r-o-f-u-t that's what we would 6 have called Box springs, there's Box canyon creek. 7 MR. YEAMANS: And does not say who filed on this one? 8 A. The Box spring was filed on by Mr. 9 Ouderkirk who is in Elko, the street is named for out 10 here Nels Ouderkirk. 11 12 Q. I remember his name in the Diamond Dust 13 Devils. This we'll call it Exhibit Number 7, this is 14 a map for the proof of appropriation for Number 2 4 4 15 1? 16 A. Yes, this is Davis creek and the land is 17 used it's south of the Box spring-- north of the Box 18 springs. 19 Q. Davis creek was the land irrigated north of 20 Box springs. 21 A. Yes, correct it irrigated north of Box 22 springs where the Crofut was, right. 23 MR. THOMPSON: Right and they kind of let that 24 one drop, yeah, they used to irrigate land directly 44

out from that, and then they let it drop. They never 1 2 did a prove up on that pattern. THE WITNESS: Well there was a well down there. 3 MR. THOMPSON: I think that a half brother 4 5 irrigateD that or something. THE WITNESS: Walt drilled a well. 6 7 MR. GARDNER: Yes, I, and her brother went north of there and we went down until we hit hard pan 8 9 and we got into some water, but it wasn't enough to 10 water with it was mostly mud. Q. So did you finish? 11 12 MR. GARDNER: We never completed it? 13 A . They did put a windmill in there. 14 I think that the 3 C's did put a windmill 15 in there. 16 Q. Who are they? 17 MR. THOMPSON: Civil Conservation Corp. 18 MR. GARDNER: Yes, soil conservation corp? 19 A. It was for poor boys in dire states during 20 the depression. MR. YEAMANS: Let's go on with the next exhibit 21 22 if we can. 23 Q. This is a map which appears to be a 24 continuation of proof of application number 0 2 4 4 1 45

1 and does that, it shows water coming from Davis creek, is that correct? 2 If this is west and this is east. 3 Α. Well I believe that this is located north 0. 4 5 south I think that this may be the ditch. This would be the water is shown flowing from north to south? 6 7 MR. GARDNER: True. 8 Q. So that would have been probably the ditch 9 itself rather than the creek? MR. GARDNER: That's the ditch. Now I don't 10 11 remember seeing too much water in it at any one time. 12 Q. That was from the mountain drainage? 13 A. Yes, that was the run off from the snow. 14 Q. Okay. The snow pack okay and this is Exhibit Number 8. 15 16 This is will be exhibit 9 a map for proof 17 of appropriation number 0 1 1 1 1 submitted by Jorgan P Jacobson for the waters of Box springs canyon? 18 19 Α. There are no dates on any of this. 20 No ma'm. Here's a day? 0. 21 May 29th 1912. Α. 22 Q. Uh huh. And that's when it was surveyed by at the request of your Father? 23 24 A. Well my Father. 46

JANELLE GRANTHAM

| 1 | Q. George S Nicholson is the surveyor? |
|----|---|
| 2 | A. But my Father didn't have anything to do |
| 3 | with this land at that time. |
| 4 | Q. Okay. This is the water from Box spring |
| 5 | canyon, now, did your Father own the land at Box |
| 6 | spring canyon? |
| 7 | A. Not at that time. He didn't purchase that |
| 8 | land until 1926 from my grandparents. |
| 9 | Q. But at this time possible though that the |
| 10 | waters from Box springs canyon had been put to use on |
| 11 | the land prior to it being purchased by your Father? |
| 12 | A. Yes, it was put to use by my uncle Andy and |
| 13 | the Dibble's. |
| 14 | Q. Are you referring to Andrew Dibble? |
| 15 | A. Yes and Andrew Crofut? |
| 16 | A. Andrew Dibble Crofut and Andrew Dibble was |
| 17 | his stepfather. |
| 18 | Q. So this map though was not drawn until |
| 19 | 1912? |
| 20 | A. It was then owned by them, but not my |
| 21 | Father. |
| 22 | Q. But showing the water that was put to use |
| 23 | when the Dibble's and the Crofut's owned the land? |
| 24 | A. Yes. |
| | 47 |

| 1 | (Whereupon an off the record discussion |
|----|---|
| 2 | ensued.) |
| 3 | MR. YEAMANS: Q. Back on the record here, Mrs. |
| 4 | Gardner. We are looking at Exhibit Number 10, here |
| 5 | which is a map for the proof of appropriation |
| 6 | application Number |
| 7 | 2 4 4 1 submitted by Jorgan Jacobson for the waters |
| 8 | of Davis canyon, Eureka county, Nevada. |
| 9 | And this if you will look at the map shows |
| 10 | this would be north pointing to the top of the map in |
| 11 | this direction. So west would be on the left side |
| 12 | and then east would be on the right side of the map? |
| 13 | A. This is east. |
| 14 | Q. Yes, ma'm? |
| 15 | A. And this is west and Davis canyon come from |
| 16 | the east to the west the canyon creek goes down that |
| 17 | way, okay. |
| 18 | Q. And here you have a ditch taking diverting |
| 19 | water from Davis canyon? |
| 20 | A. Up to the Box springs ranch. |
| 21 | Q. I am I'm not real sure. |
| 22 | Oh from right there? |
| 23 | A. Box springs canyon bringing the water south |
| 24 | to the waters of Box spring canyon. |
| | 48 JANELLE GRANTHAM |

| 1 | Q. Right. Okay. And Exhibit Number 11 is the |
|----|---|
| 2 | map of appropriation of water to application 6 9 1 4 |
| 3 | and here you can see on this map, once again no it |
| 4 | appears here that north north is not clearly shown |
| 5 | on here? |
| 6 | A. Is that north. |
| 7 | Q. Well here is section 2? |
| 8 | A. This goes down this is usually going north |
| 9 | and south isn't it |
| 10 | Q. Usually is but this is the southeast corner |
| 11 | of Section 3 Township 23 north Range 54 east. So |
| 12 | this is section one section two, section three sits |
| 13 | over here. |
| 14 | So we are looking at it with north towards |
| 15 | the short edge of the map that would be section one, |
| 16 | two, and three as you read them across from the north |
| 17 | east corner to the north west corner on a Township |
| 18 | range. |
| 19 | MR. GARDNER: That's right. |
| 20 | Q. And here it shows water being diverted from |
| 21 | Cottonwood spring which is in the southwest guarter |
| 22 | of Section 1. Is that appear to be the case to you |
| 23 | Mrs. Gardner or Mr. Gardner that this is the center |
| 24 | of section 1 here? |
| | 49 |

| 1 | A. Well. |
|-----|--|
| 2 | MR. GARDNER: As I recall my surveying 1, 2, 3 |
| 3 | and go down 6 then you drop down 7 and come back and |
| 4 | you wind up here with 12. |
| 5 | Q. Uh huh? |
| 6 | MR. GARDNER: Is that right. |
| 7 | Q. That's the way that I understand it from my |
| 8 | map reading. |
| 9 | So this point here would be in, now each |
| 10 | one, a section 2 is this, these are the quarter |
| 11 | quarter sections of 2 it appears to me? |
| 12 | A. This wouldn't be section 3, then. |
| 13 | Q. No I think that they crossed out here and |
| 14 | put 3 above. That refers to the southeast corner of |
| 15 | section 3, which would be right here and it appears |
| 16 | that that's the southeast corner of section 3. And |
| 17 | they surveyed over here to Cottonwood spring which |
| 18 | would be in the southwest corner of section 1? |
| 19 | A. Right. |
| 20 | Q. And this was a map submitted by your Father |
| 21 | Mrs. Gardner. By Mr. Jacobson? |
| 22 | A. Yes. |
| 23 | Q. Okay. Thank you. |
| 24 | I'd like to enter in one more exhibit and |
| -14 | 50 |

| 1 | this is just a continuation of the topographic maps |
|----|--|
| 2 | and this is a 15 minute series map titled railroad |
| 3 | pass Nevada, and at the southernmost part of the map |
| 4 | it shows the upper most reach of Box spring canyon |
| 5 | and north of that it shows Davis canyon draining to |
| 6 | the west off of the Diamond range? |
| 7 | A. That all sounds right, doesn't it, Walt. |
| 8 | MR. GARDNER: Uh huh. |
| 9 | MR. YEAMANS: We'll enter it as Exhibit Number |
| 10 | 1 A and that will be 1 A and we'll have |
| 11 | I'd like to ask you, Mrs. Gardner, once |
| 12 | again in your opinion and your impressions from |
| 13 | growing up there at the Diamond springs ranch would |
| 14 | it be your opinion, or your thoughts, your belief |
| 15 | that all of the waters from the Diamond springs had |
| 16 | been put to beneficial use prior to 1905? |
| 17 | A. Yes. |
| 18 | Q. Thank you, Mrs. Gardner? |
| 19 | A. Because my Father didn't come from Denmark |
| 20 | until 1902 and it was well established place before |
| 21 | that. |
| 22 | Q. Is it your impression that it was a well |
| 23 | establish accomplished and full operating ranch when |
| 24 | the Taft family operate it in the 1880's? |
| | 51 JANELLE CRANTHAM |
| | |

A. Yes.

1

| 2 | Q. And looking back in your lifetime and your |
|----|---|
| 3 | childhood there talking with your Father and your |
| 4 | Great Uncle Nels Toft, was it your impression that |
| 5 | the Taft's had put all that water to beneficial use |
| 6 | by use of the ponds when they owned it? |
| 7 | A. Yes, I think that they were pretty |
| 8 | enterprising. |
| 9 | Q. Thank you, very much, Mrs. Gardner? |
| 10 | MR. YEAMANS: Will keep the exhibits, Milt will |
| 11 | get the Exhibit Number 4 to me. |
| 12 | 00000 |
| 13 | |
