State Engineer Jason King
NV

Dear State Engineer Jason King State Engineer King,

We believe the scientific information is overwhelming: Draining 50 billion gallons of groundwater from the Great Basin would devastate Native American communities, rural economies and wildlife habitat over a huge area.

Further, the families and small businesses of Las Vegas, recovering from a brutal recession, cannot afford the huge price tag for this project.

The world's largest power generating convention is being held here in Las Vegas December 13-15, 2011. The floor plan shows a nuclear power section as well as other power generating equipment and services. See www.power-gen.com.

I am trying to rent a booth in the Nuclear Power section that would feature seven Clean Energy Inventions: Hydro-Magnetic Dynamo, Electrino Fusion Power Reactor, Electron Spiral Toroid Spheromak Micro-Fusion Reactor, Moe-Joe Orgone Energy Cell, Thorium Powerpack, Capacitive step-down Transformer, and Environmental Heat Engines for Emergency Nuclear Fuel Cooling. For more information, see my website www.padrak.com/vesperman.

Three of the Clean Energy Inventions apparently can generate 1000 megawatts - enough to justify replacing nuclear power plants with reliable safe non-polluting generators at a drastically reduced cost. These are the Hydro-Magnetic Dynamo, Electrino Fusion Power Reactor, and Electron Spiral Toroid Spheromak Micro-Fusion Reactor.

A safe non-polluting economical 1000-megawatt generator would be able to cheaply desalinate very large quantities of ocean water for California. The Colorado River water then not needed by California could be utilized by Southern Nevada at far less cost than a \$15 billion pipe to central eastern Nevada.

Furthermore, Robert Stewart, inventor of the Stewart cycle
