Subject: A 300-Mile Pipeline is Not the Answer.

Dear Jason King,

I am very concerned about the plans to pump ground water from the Great Basin aquifers. The loss of water in these ancient water tables will not be recharged fast enough and the water level will drop. This will intern have a negative effect on the surface water and springs. The resultant damage to wildlife and ranching could be devastating. I am concerned that scientists that have found fault with these plans are being ignored. The powerful interests in southern Nevada are pushing their interests over Nevada's rural natural resources. This pipe line will most likely Hurt our only national park. Mr King, please make sure you are listening to the good scientific research that has been done which shows the problems that a water pipe line to feed the needs of the south will cause.

Sincerely,  
Mr. Willard Adams
