

CLARK, LINCOLN, AND WHITE PINE COUNTIES GROUNDWATER DEVELOPMENT PROJECT EIS

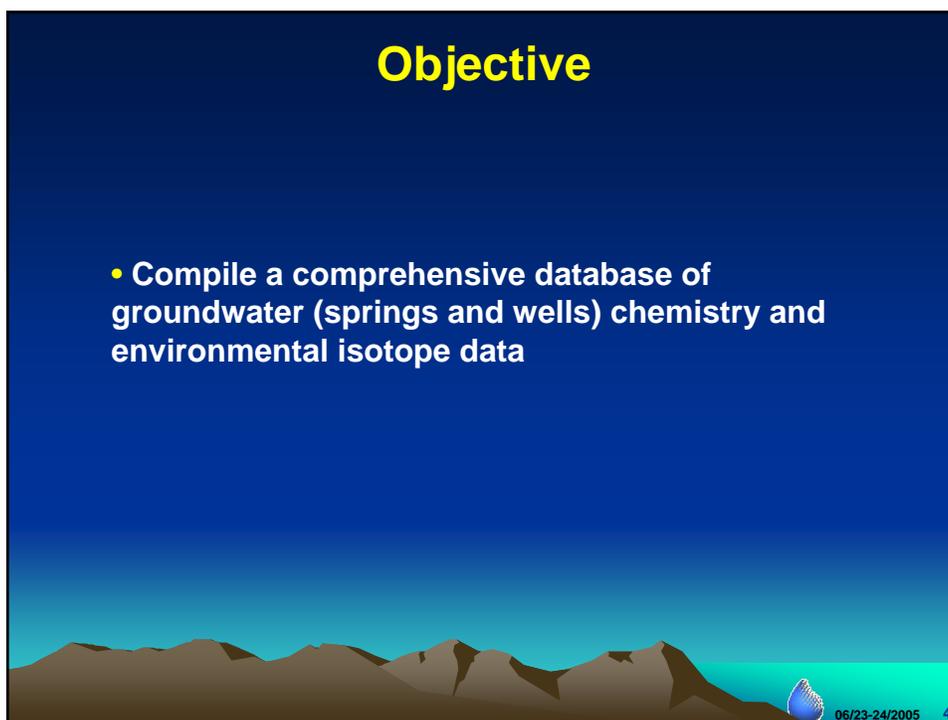

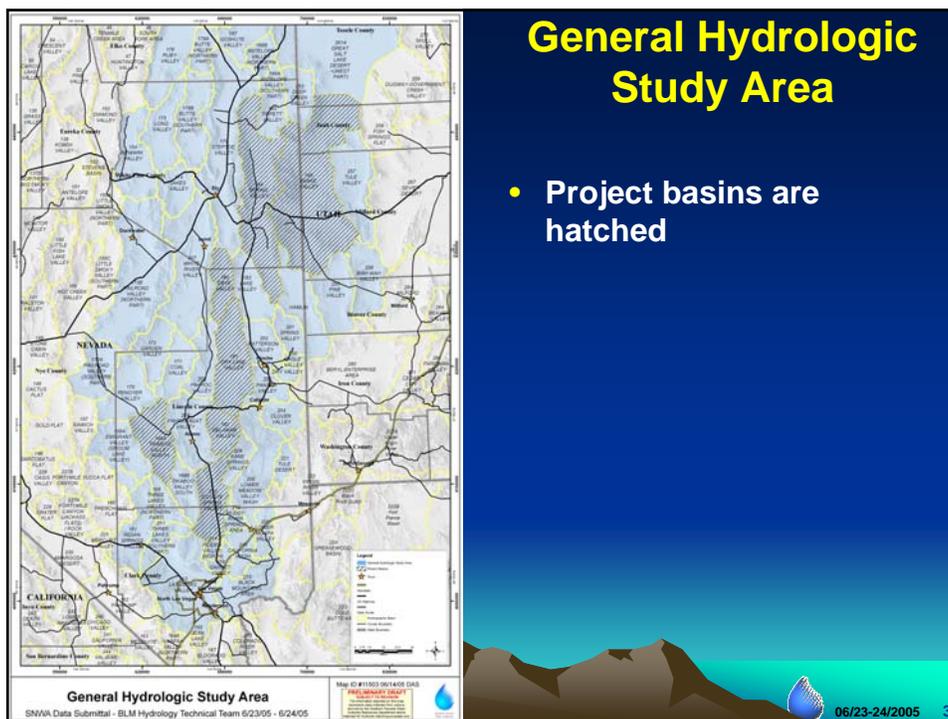

WATER RESOURCES TECHNICAL REVIEW
MEETING 1 – BASELINE DATA
June 23-24, 2005

HYDROCHEMISTRY AND GEOCHEMISTRY

Stephen Y. Acheampong, PhD
Southern Nevada Water Authority

Overview

- Objective
- Types of data compiled
- Sources of Data
- Data sites
- Data considerations
- Possible use of data
- Location of information

Types of Data Compiled

06/23-24/2005 5

Types of Data Compiled

- Field Parameters – Water temperature, dissolved oxygen (DO), electrical conductivity (EC), and pH
- Major ions (gross chemistry) and trace element data
- Environmental isotope data (stable, radio isotopes and radiogenic isotopes) - ^{18}O , ^{14}C , ^{13}C , ^3H , $^{234}\text{U}/^{238}\text{U}$, $^{87}\text{Sr}/^{86}\text{Sr}$, $^{34}/^{32}\text{S}$, and $^{11}/^{10}\text{B}$

06/23-24/2005 6

Data Sources

06/23-24/2005 7

Data Sources

- Southern Nevada Water Authority (SNWA)
- Desert Research Institute
- U.S. Geological Survey Regional Aquifer Analysis (USGS RASA) Professional Papers
- U.S. National Water Quality Assessment (NAQWA) Program

06/23-24/2005 8

Data Sources (cont'd)

- USGS National Water Information System (NWIS) at <http://waterdata.usgs.gov/nwis>
- Ertec and Fugro Consulting Reports on MX Siting Investigation Project
- Geothermal Laboratory at the Southern Methodist University (David Blackwell; at their website www.smu.edu/geothermal)

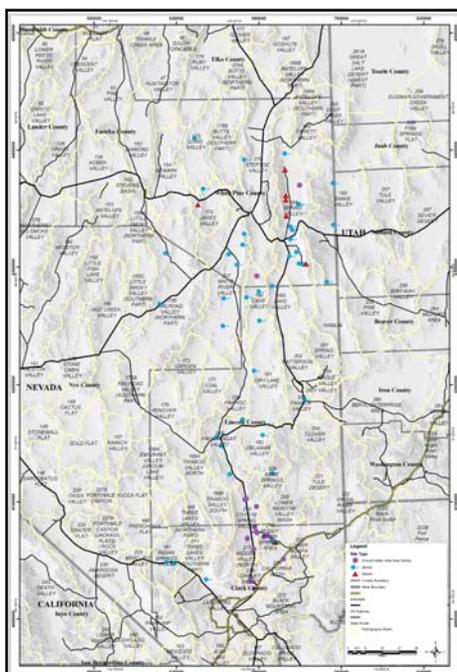

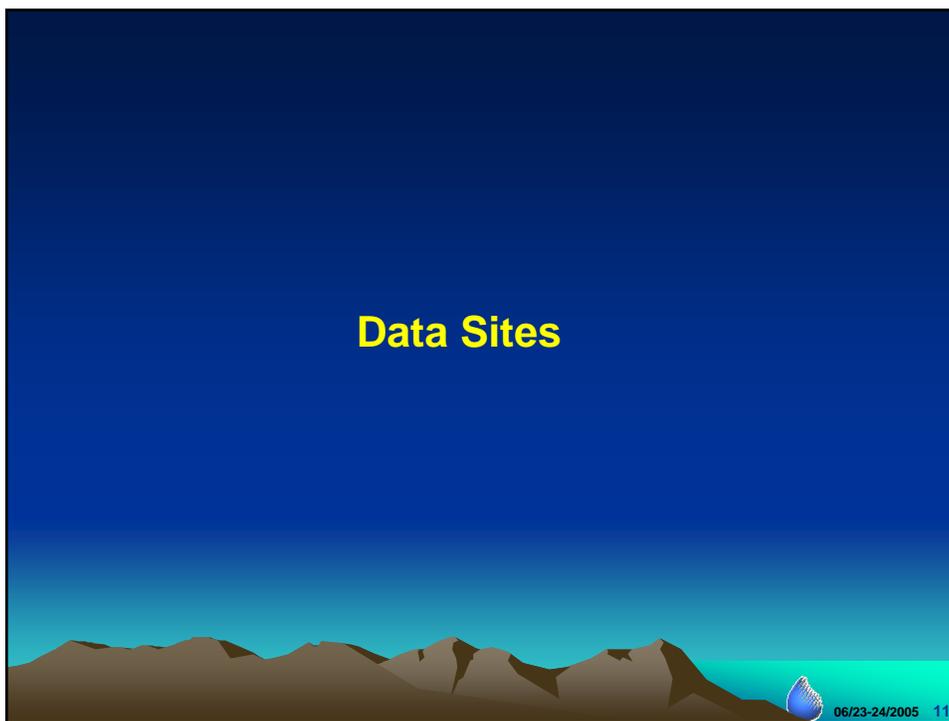

06/23-24/2005 9

Data Sources (cont'd)

- Nevada Bureau of Mines and Geology <http://www.nbmj.unr.edu/geothermal/geochemdata/readme-geochem.htm>
- State of Nevada Public Water System (PWS)
- State of Nevada Water Resources Bulletins
- Miscellaneous drilling and consulting reports

06/23-24/2005 10

Data Sites

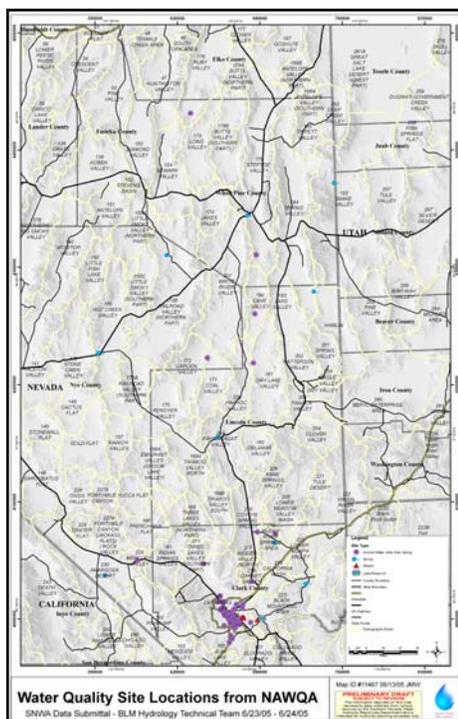

Water Quality Site Locations from SNWA

SNWA Data Submittal - BLM Hydrology Technical Team 6/23/05 - 6/24/05

SNWA Data Sites

- Springs and wells sampled by SNWA – a total of 81 sites
- Includes data from reports by consulting firms for individuals and organizations in the study area (e.g. Beverly Jacob's well in Dry Lake Valley)

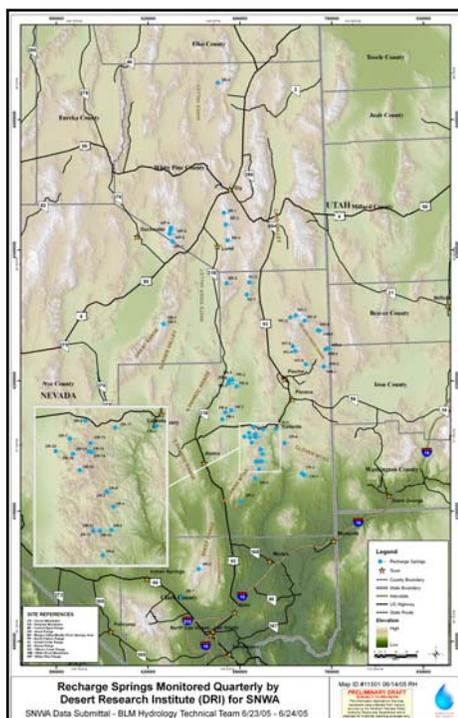

USGS NAWQA Sites

- Consists of springs and wells
- A total of 61 sites – downloaded in the summer of 2004 and updated on May 25, 2005

Map ID# 11467

06/23-24/2005 13

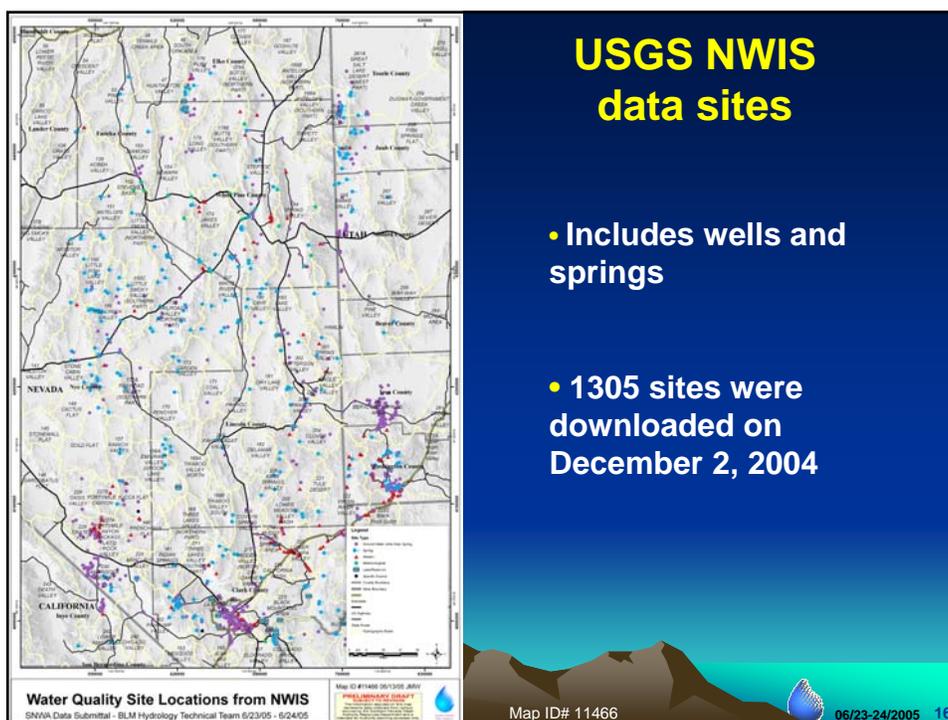

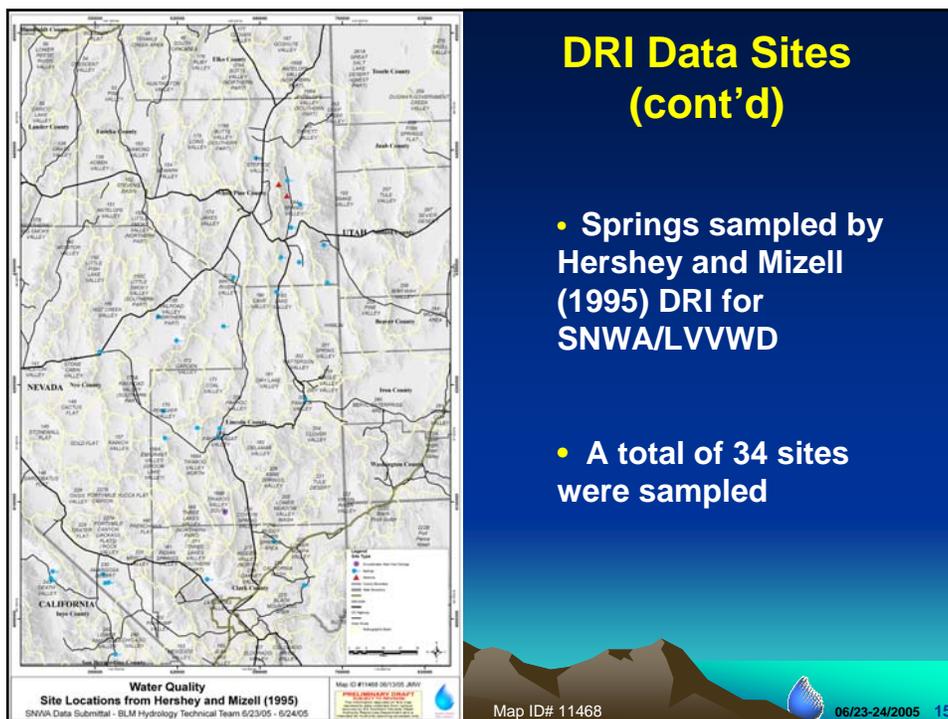

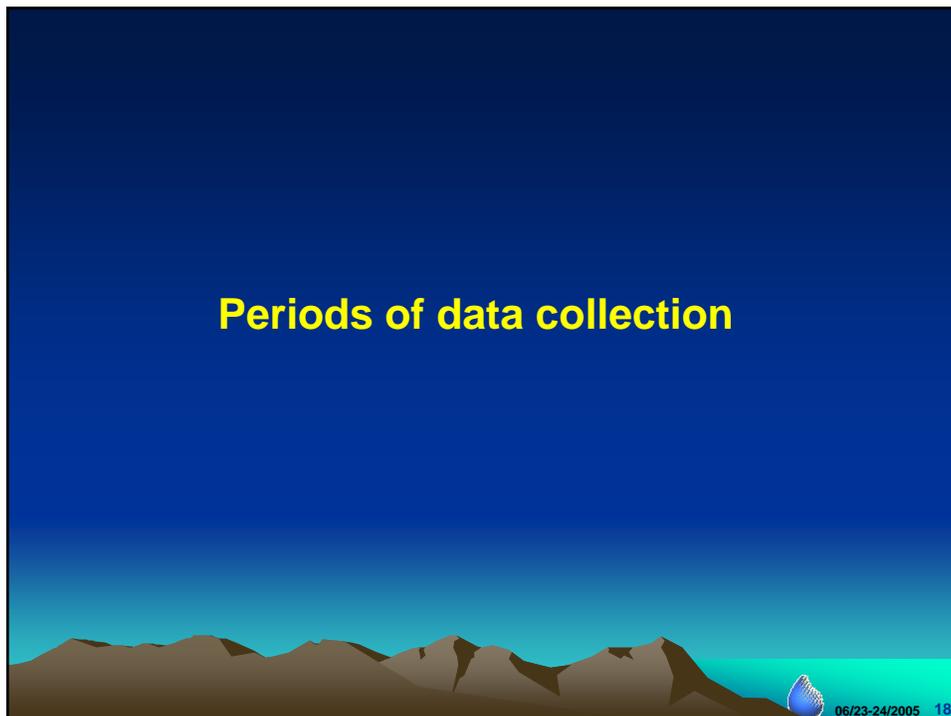

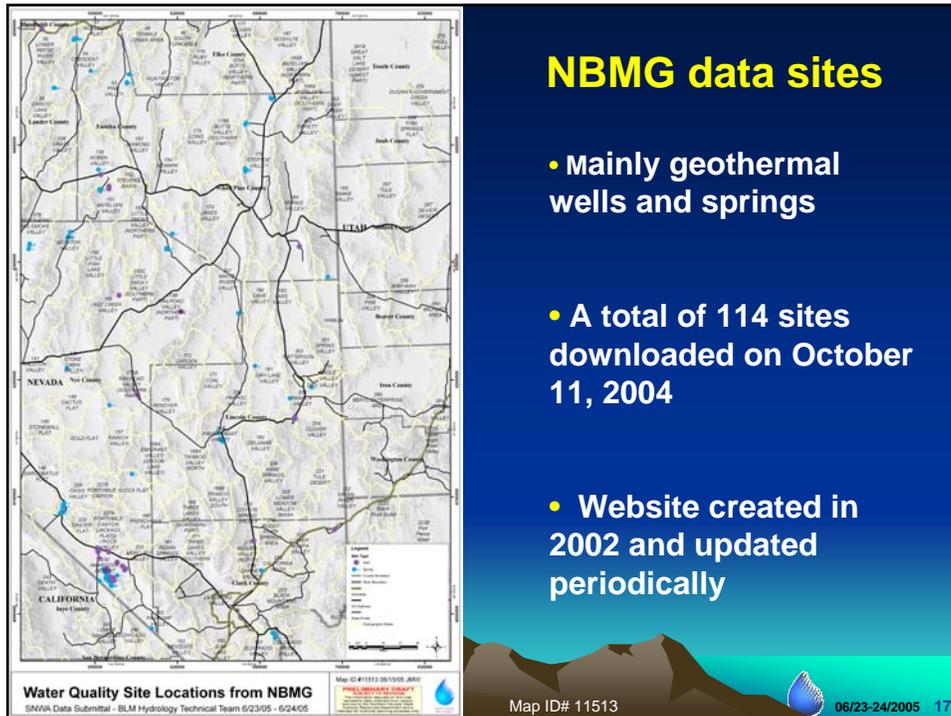

DRI Sites

- Springs in recharge areas monitored quarterly by DRI for SNWA
- Mostly mountain-front springs (but includes some regional springs)
- A total of 61 springs are monitored

Map ID# 11501

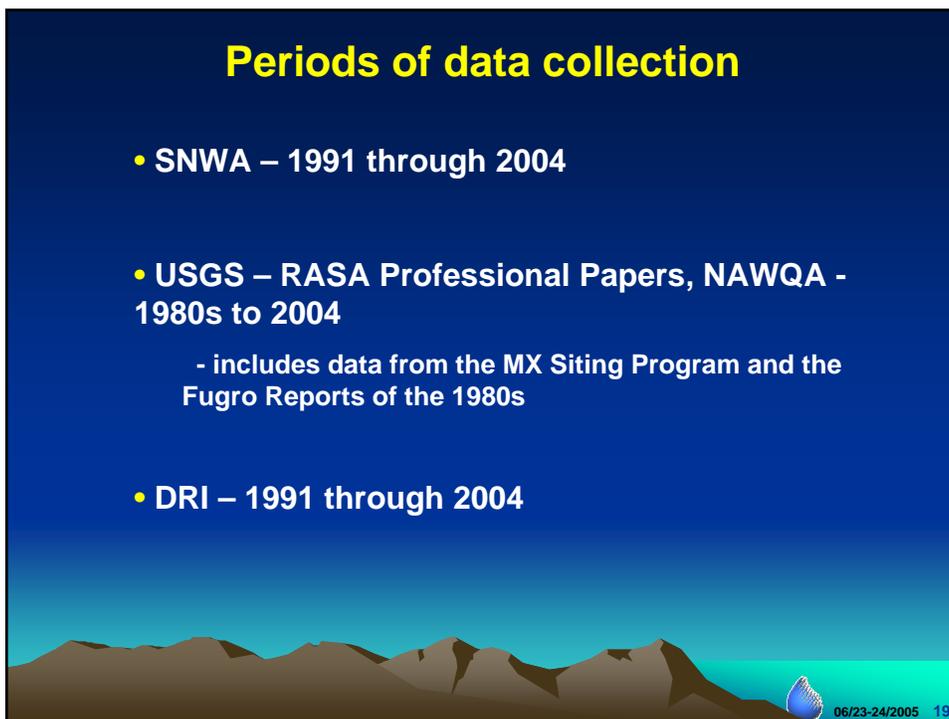

06/23-24/2005 14

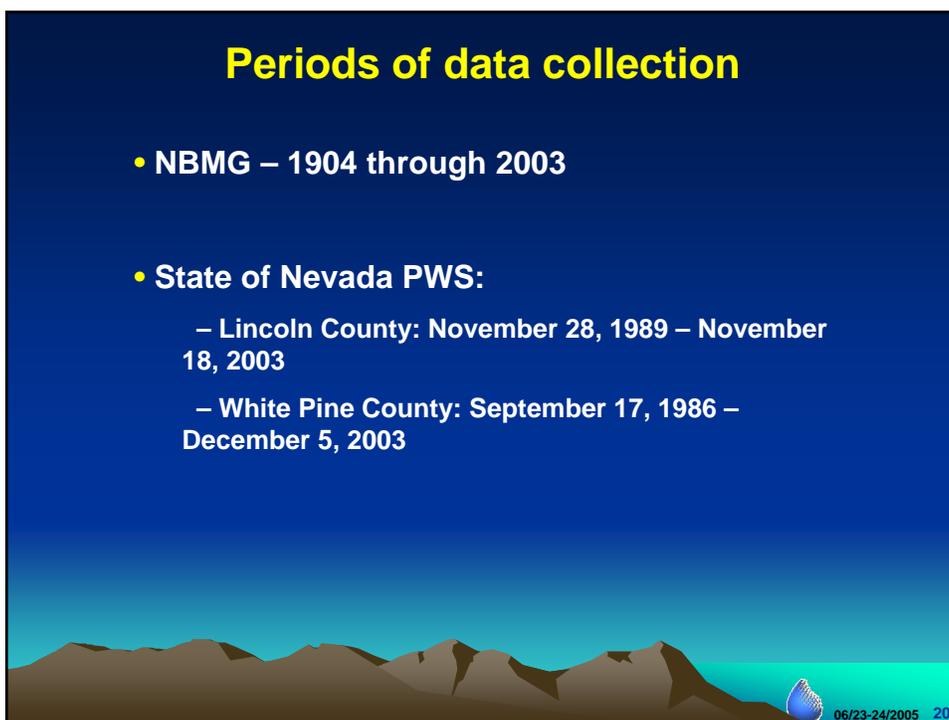

Periods of data collection

- SNWA – 1991 through 2004
- USGS – RASA Professional Papers, NAWQA - 1980s to 2004
 - includes data from the MX Siting Program and the Fugro Reports of the 1980s
- DRI – 1991 through 2004

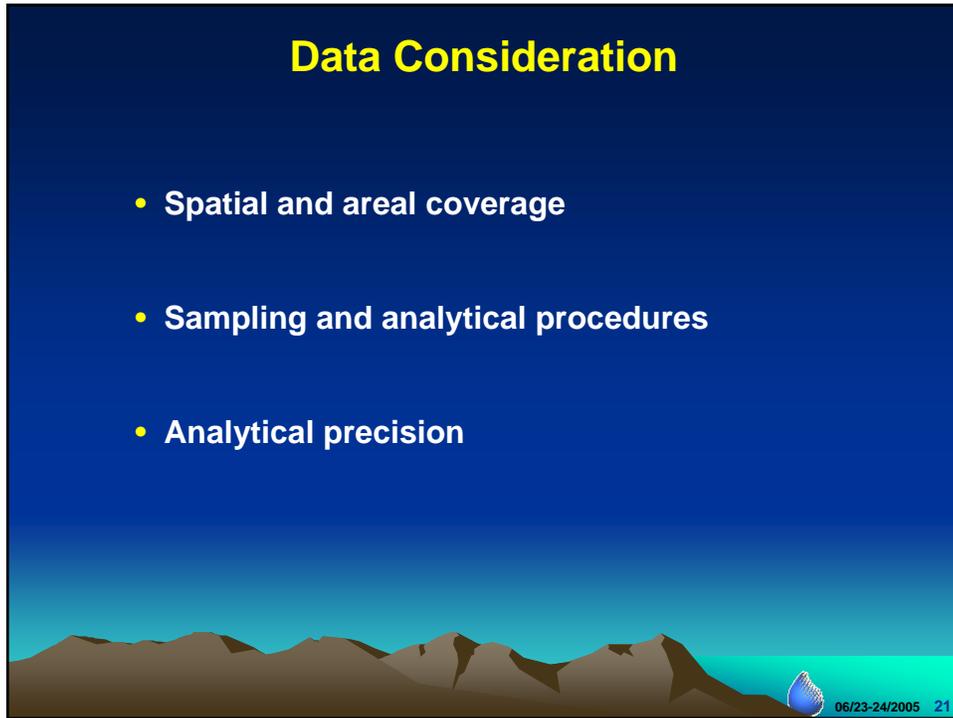

Periods of data collection

- NBMG – 1904 through 2003
- State of Nevada PWS:
 - Lincoln County: November 28, 1989 – November 18, 2003
 - White Pine County: September 17, 1986 – December 5, 2003

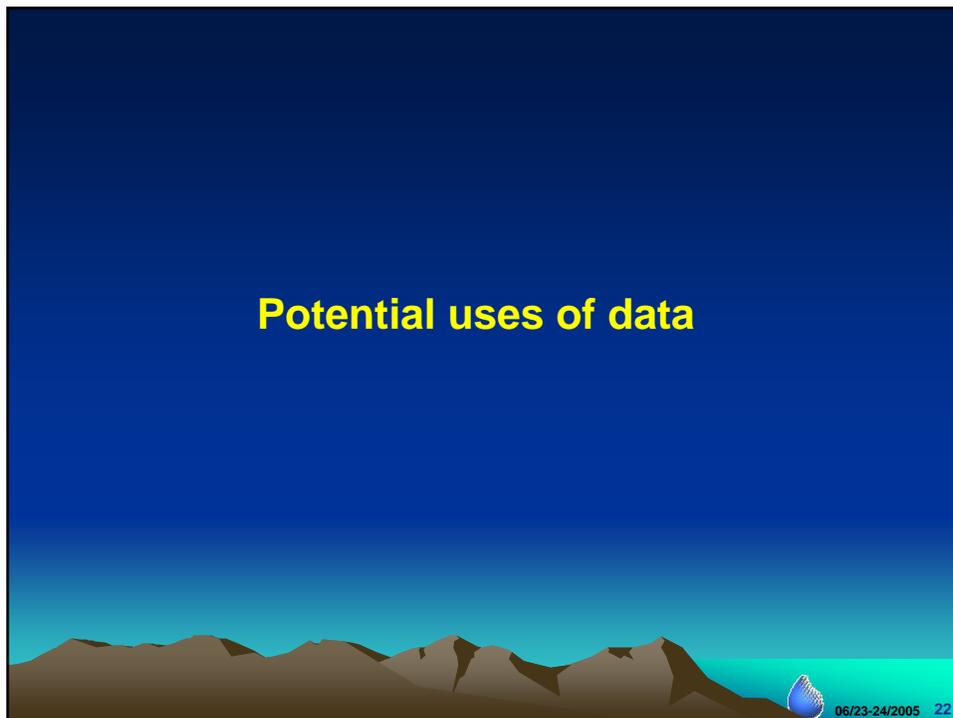

Data Consideration

- Spatial and areal coverage
- Sampling and analytical procedures
- Analytical precision

Potential uses of data

Potential Use of Data

- Gross chemistry (major ions), trace elements, and field chemistry data will be used to determine baseline quality of groundwater in the area
- Major ions data – used to determine chemical water types and processes controlling groundwater chemistry
- Gross chemistry and temperature data - used to estimate depths of groundwater circulation

06/23-24/2005 23

Potential use of data

- Isotopes provide insight into the age, origin, and pathways of water movement
- Deuterium and oxygen-18 – used to determine recharge sources and pathways of groundwater
 - They (D and ^{18}O) are part of the water molecule and are ideal tracers for determining the sources and mixing relations of different waters
- Deuterium and chloride – used to estimate evaporation

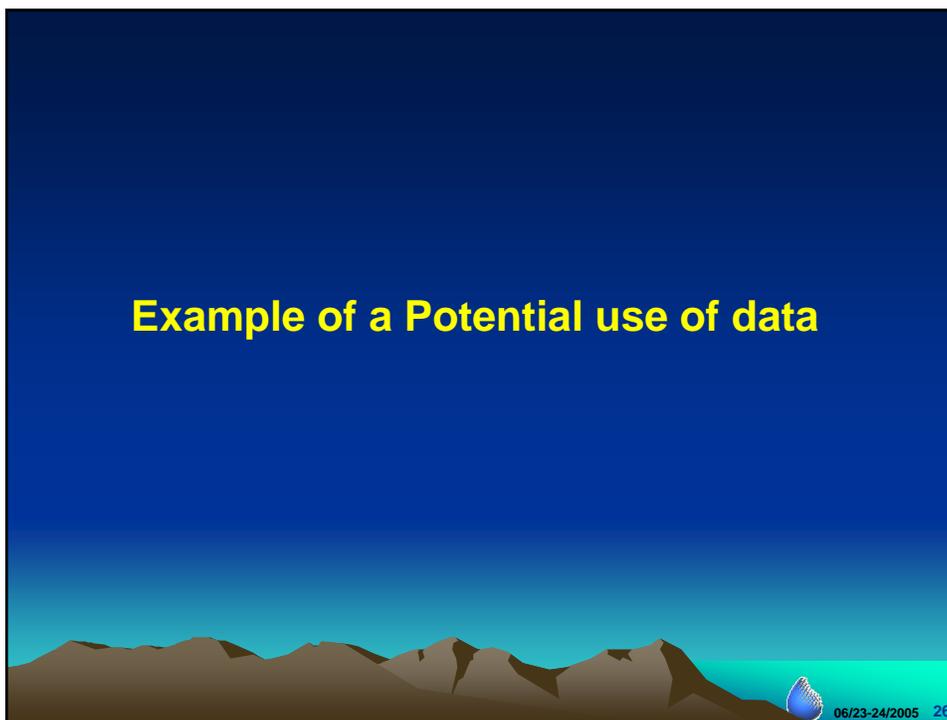

06/23-24/2005 24

Potential Use of Data

- Carbon-14 and tritium – used to estimate the age and travel times of groundwater
- Uranium, strontium, and boron isotopes – used to determine the sources and mixing of groundwater
 - they (U, Sr, and B) undergo geochemical reactions that must be accounted for
- Sulfur isotopes – used to trace the source of sulfur

Example of a Potential use of data

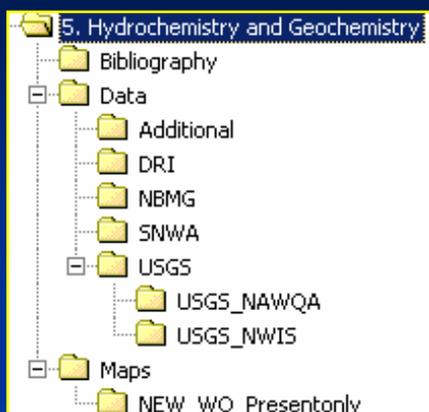

Summary

- **Geochemical data collected as part of this project and the historical data compiled will be used with other hydrologic and geologic data to evaluate the water resources in the area**

06/23-24/2005 29

Location of information

- **Information provided and all related geochemistry materials are located in the directories shown on the left**

06/23-24/2005 30
