Nevada Division of Water Planning

**Foreword
to
Nevada Population Forecasts**

Appendix 2 presents a series of population estimates and forecasts used in the *Nevada State Water Plan*. The Nevada Division of Water Planning, like other State agencies, is bound by Executive Order (August 15, 1989) to use the population estimates and forecasts developed by the Nevada State Demographer. However, in some cases, significant discontinuities exist between the State's official state and county population forecasts and those forecasts developed by some local governments and other agencies. Because these discontinuities have important ramifications on projected water use trends, the Division, in agreement with the State's contracting agency for population forecasts, the Nevada Department of Taxation, has utilized the latest forecasts provided by both the Clark County Department of Comprehensive Planning and the Washoe County Department of Community Development. The Division also developed the population forecasts for the remaining counties.

Population forecasts for the total state were not forecast independently, but instead, represent an aggregation of individual county population forecasts. While both sets of population forecasts are presented in this appendix for comparative analysis purposes and to provide a range of population projections, it was the forecasts developed by or adopted by the Division that constituted the forecasts used in the water plan's forecasts of water withdrawals.

Nevada Population Forecast Summary
